Individuals or Households.

*Estimated Completion Time:* 12 minutes.

*Automated Data Collection:* At the present time, there is no automated way to gather this information, since it includes asking visitors to evaluate services and facilities that they used in the parks. The burden is minimized by only contacting visitors during a 7 day period at each park.

The National Park Service is soliciting comments on the need for gathering the information in the proposed visitor studies listed above. The NPS is also asking for comments on the practical utility of the information being gathered, the accuracy of the burden hour estimate, and ways to minimize the burden to visitors to these parks. #### SUPPLEMENTARY INFORMATION:

##### I. Background

On March 12, 1996 (61 FR 10012), MSHA and NIOSH published a notice in the Federal Register reopening the record for their joint notice. The joint notice proposed a finding that the average concentration of respirable dust, to which each miner in the active workings of a coal mine is exposed, can be measured accurately over a single shift. This finding is being made in accordance with section 202(f) of the Federal Mine Safety and Health Act of 1977. The Agencies reopened the record (1) to submit a definition of accuracy; (2) to supply new data and statistical analyses on the precision of coal mine respirable dust measurements obtained using approved sampling equipment; and (3) to allow the public time to review and submit comments on this supplemental information. This additional information does not change the proposed findings.

The comment period had been scheduled to close on April 11, 1996. In response to requests from the public for additional time to review this information and prepare their comments, the Agencies extended the comment period until June 10, 1996 (61 FR 16123). This extension notice also announced that a public hearing would be held prior to June 10, 1996.

##### II. Conduct of Hearing

The purpose of the public hearing is (1) to receive relevant comments and (2) to answer questions concerning the definition of accuracy and the new data and statistical analyses on the precision of coal mine respirable dust measurements obtained using approved
