In 1983, the licensee constructed a new substation (named Hawkins) between Don Pedro Project and Geer Substation. SUPPLEMENTARY INFORMATION:

Affected entities: Entities affected by this action are companies that produce, import, export, transform, and destroy controlled ozone-depleting substances, as well as suppliers of laboratory ozone-depleting chemicals and companies deemed to have an essential use of these chemicals beyond the phaseout.

Title: "Recordkeeping and Periodic Reporting of the Production, Import, Export, Recycling, Destruction, Transshipment and Feedstock Use of Ozone-depleting Substances." OMB Control Number: 2060-0170. EPA Control Number: 1617.06. Expiration Date: September 30, 1996.

Abstract: EPA accelerated the phaseout of controlled class I ozone-depleting substances under Section 606 of the Clean Air Act Amendments of 1990 (CAA) in regulations published on December 10, 1993, in the Federal Register (58 FR 65018) and codified in 40 CFR Subpart B (§ 82.1 *et seq.*) These regulations were amended in the Federal Register on May 10, 1995, (60 FR 24970) in order to ensure an orderly phaseout and account for exempted production and consumption. Under the Montreal Protocol and Title VI of the CAA, consumption is defined as production plus imports minus exports. The ICR renewal indicates changes in reporting requirements resulting from the phaseout. The reasons information is collected, the way information is used, and whether the requirements are mandatory, voluntary, or required to obtain a benefit, are described below. The ICR renewal will not include any burden for third-party or public disclosures not previously reviewed and approved by OMB.

EPA monitors production, import, export, transformation, destruction of controlled substances and special
