#### **SUPPLEMENTARY INFORMATION:**

##### **Background**

The southern (California) sea otter was listed as threatened in 1977 under the Federal Endangered Species Act of 1973, as amended. It is also recognized as a depleted population pursuant to the Marine Mammal Protection Act. Reduced range and population size, vulnerability to oil spills, and the oil spill risk from coastal tanker traffic were the primary reasons for the threatened status. The southern sea otter population contains about 2,400 individuals and ranges between Point Año Nuevo south to Purisima Point. Approximately 17, including pups, otters are at San Nicolas Island as a result of translocation efforts to establish an experimental population. After review of new biological information, the Service, with assistance of the Southern Sea Otter Recovery

Team, drafted for public review and comment a revised recovery plan in 1991. After review of public comments on that draft and review of new technical information regarding oil spill risk to southern sea otters, the Service, with assistance of the Southern Sea Otter Recovery Team and technical consultants, has drafted for public review and comment a new revised recovery plan.

#### **Public Comments Solicited**

The Service solicits written comments on the recovery plan described. All comments received by the date specified will be considered prior to approval of the plan.

#### **Authority**

The authority for this action is Section 4(f) of the Endangered Species Act, 16 U.S.C. 1533(f).
