

approval of this geographic extension; and this area is neither expected to increase the number of marine mammals taken by harassment, nor result in additional marine mammal species being taken, NMFS modified the IHA on September 9, 1996, to include the waters offshore from the Colville River Delta, Alaska.

The August 30, 1996, letter notified NMFS that, in accordance with the results of the transmission loss (TL) test required by condition 5(d) of the IHA, the safety ranges around the source for pinnipeds and cetaceans should be increased by 100 m (328 ft) to 250 and 750 m (820 and 2,460 ft), respectively. Further investigation determined that these increased safety ranges would be appropriate for the seismic array only, and would not apply to the use of single airguns, which had a 20 dB (re 1μPa @ 1 m) lower amplitude. NMFS understands that these increased safety ranges were immediately implemented by BPXA. NMFS has reviewed the preliminary results of the TL test and concurs with this recommended modification. Accordingly, condition 5(b) of the IHA has been modified.
