Juvenile, ESA-listed fall chinook salmon are proposed to be acquired from the Smolt Monitoring Program under the authority of permit 822, collected by purse seine, or collected from the juvenile bypass facility at Lower Granite Dam; transported as necessary to Lower Granite Dam; anesthetized; surgically implanted with radio transmitters; allowed to recover from the anesthetic and the surgical procedure; released at Lower Granite Dam; and tracked electronically. Indirect mortalities of ESA-listed fish associated with the research activities are also requested. Modification 2 would be valid for the duration of the permit. Permit 956 expires on September 30, 1999.

Those individuals requesting a hearing on either of the two requests for a permit or the permit modification request should set out the specific reasons why a hearing would be appropriate (see **ADDRESSES**). The holding of such a hearing is at the discretion of the Assistant Administrator for Fisheries, NOAA. [Recommendation 97-1] Safe Storage of Uranium-233

Dated: March 3, 1997.

Approximately one ton of Uranium-233 (²³³U), a man-made isotope of uranium, was produced by the Department of Energy (DOE) and its predecessor agencies. This material has been studied extensively, and uses were found for it in DOE's defense-related applications and in nuclear reactor programs supported both by DOE and commercial companies. The ²³³U in this country is now all in the possession of DOE. It is presently stored at several DOE sites, predominantly within defense nuclear facilities under the purview of the Defense Nuclear Facilities Safety Board (Board). Almost all of the ²³³U has been determined by DOE to be excess to its needs, and with minor exceptions it is regarded as legacy material. As will be apparent from the following, however, any future
