Proposed Project

1. A Health Study of Acute Respiratory Outcomes on Staten Island—New—The purpose of this proposed study is to investigate and determine whether odor and air pollutants emanating from Fresh Kills Municipal Landfill are associated with respiratory morbidity among two populations of adults diagnosed with asthma. The study will involve two geographically determined cohorts, living on Staten Island. Data collection will begin with a baseline questionnaire. The study will continue with a six week follow-up period. Daily diaries will be utilized to collect self-reported information on variables such as respiratory-related health outcomes, peak flow measurements, odor perception, and time spent outdoors. Exposure measurements of ozone, PM10 and hydrogen sulfide will be collected concurrently. The statistical analysis will compare health outcome measures (i.e. symptoms, change in peak flow, etc.) to measurements of odor perception and other exposure variables. The total annual burden hours are 3,365.
