SUPPLEMENTARY INFORMATION:

I. Background

The Occupational Safety and Health Act of 1970 (the Act) authorizes the promulgation of such health and safety standards as are necessary or appropriate to provide safe or healthful employment and places of employment. The statute specifically authorizes information collection by employers as necessary or appropriate for the enforcement of the Act or for developing information regarding the causes and prevention of occupational injuries, illnesses, and accidents.

A number of OSHA's standards require certain equipment to be "tested" (or "approved") by a "nationally recognized testing laboratory" (NRTL). In order for an organization to meet the definition of a NRTL, it must be "recognized" by OSHA and laboratories must apply to OSHA for recognition. Recognition is granted after OSHA determines that the organization meets certain criteria. OSHA can only make this determination after reviewing and evaluating "information" provided by the organizations seeking such recognition. The applicant would have to provide OSHA with sufficient information and detail to demonstrate that the applicant meets the definition of a NRTL and that it has the capability to test and examine equipment and materials for fire or electrical safety. More specifically, the applicant must demonstrate that it has the facilities, equipment, trained staff, test procedures

and calibration, and quality control programs.
