#### Atlantic Striped Bass Fishery; 1996 Survey of Atlantic Striped Bass Fisheries

**AGENCY:** National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

**ACTION:** Notice of availability of survey.

**SUMMARY:** NMFS announces the availability and summarizes the results of a survey of the Atlantic coast striped bass fisheries for 1996. The Atlantic Striped Bass Conservation Act (Act), requires NMFS to provide information on the status of the fisheries.

**ADDRESSES:** Copies of the survey results are available from Anne Lange, NOAA/NMFS/FX2, 8484 Georgia Avenue, Suite 425, Silver Spring, MD 20910.

**FOR FURTHER INFORMATION CONTACT:**

Anne Lange, (301) 427–2014.

**SUPPLEMENTARY INFORMATION:** The Act requires the Secretary of Commerce and the Secretary of the Interior to conduct a comprehensive annual survey of the Atlantic striped bass fisheries. The

following is a summary of the survey for 1996. Management measures that severely restricted the harvest of striped bass by commercial and recreational fisheries were further relaxed in 1996, as the stocks continued to rebuild.

The 1996 commercial harvest of striped bass was 5,400,000 lb (2,449 mt), an increase of 42 percent above the landings of 3,811,000 lb (1,729 mt) in 1995. The Chesapeake Bay area (Maryland, Virginia, and the Potomac River) accounted for 65 percent of the 1996 commercial landings, while Massachusetts and North Carolina accounted for 13 percent and 8 percent, respectively.

The recreational catch in 1996 was an estimated 14 million striped bass, of which 1.3 million were harvested; the remaining 12.7 million were released. The estimated weight of the recreational harvest was 14.7 million lb (6,668 mt).

Juvenile production varied among the producer areas, in 1996. In New York, the 1996 was lower than in 1995 but near the long term average. In Maryland and Virginia, the 1996 indices were the highest of their respective time-series, while the Delaware Bay index was the third highest on record. The North Carolina juvenile index increased in 1996, from a relative low in 1995, to near record levels, as seen in 1993 and 1994.

Information from sampling the population of striped bass shows an increased relative abundance from recent year classes. Copies of the survey are available upon request (see ADDRESSES).
