Application for Award to States or other entities to develop and implement methods for incorporating the products of the National Adult Literacy and Learning Disabilities (ALLD) Center into existing literacy service delivery systems for the purpose of improving services to adults with learning disabilities.

Abstract

The National Literacy Act of 1991 established the National Institute for Literacy and required that the Institute conduct basic and applied research and

demonstration on literacy; collect and disseminate information to Federal, State and local entities with respect to literacy; and improve and expand the system for delivery of literacy services. The NIFL will consider applications from states and other entities to develop and implement methods for incorporating the products and services of the National ALLD Center into existing literacy service delivery systems for the purpose of improving services to adults with learning disabilities. Evaluations to determine successful applicants will be made by a panel of literacy experts using the published criteria. The Institute will use this information to make a minimum of one cooperative agreement award for a period of up to 2 years.

NUCLEAR REGULATORY COMMISSION

[Docket No. 50-302]

Florida Power Corporation; Notice of Consideration of Issuance of Amendment to Facility Operating License, Proposed no Significant Hazards Consideration Determination, and Opportunity for a Hearing

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of an amendment to Facility Operating License No. DPR-72 issued to Florida Power Corporation, et al. (the licensee) for operation of the Crystal River Nuclear Generating Plant, Unit No. 3, located in Citrus County, Florida.

The proposed amendment would change the Crystal River Unit 3 Technical Specifications (TS) to implement 10 CFR 50, Appendix J, "Primary Reactor Containment Leakage Testing for Water-Cooled Reactors," Option B. This option allows to change from prescriptive testing requirements to performance-based testing requirements based on the leakage rate testing history of the containment and components. The proposed TS changes include revision to TS 3.6.1, 3.6.3, and addition of "Containment Leakage Rate

Testing Program" to TS 5.0. The licensee did not propose any deviations from methods approved by the Commission and endorsed in the applicable regulatory guide.

Before issuance of the proposed license amendment, the Commission will have made findings required by the Atomic Energy Act of 1954, as amended (the Act) and the Commission's regulations.

The Commission has made a proposed determination that the amendment request involves no significant hazards consideration. Under the Commission's regulations in 10 CFR 50.92, this means that operation of the facility in accordance with the proposed amendment would not (1) involve a significant increase in the probability or consequences of an accident previously evaluated; or (2) create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) involve a significant reduction in a margin of safety. As required by 10 CFR 50.91(a), the licensee has provided its analysis of the issue of no significant hazards consideration, which is presented below:

(1) Does not involve a significant increase in the probability or consequences of an accident previously evaluated.

The TS amendment does not involve a significant increase in the probability or consequences of an accident previously evaluated.

The proposed changes to the TS are to implement Option B of 10 CFR 50, Appendix J, at CR-3. The proposed changes will result in increased intervals between containment leakage tests based on the leakage rate testing history. The proposed changes do not involve a change to the plant design or operation and does not change the testing methodology.

NUREG-1493, "Performance-Based Containment Leak-Test Program," provides the technical basis of 10 CFR 50, Appendix J, Option B. NUREG-1493 contains a detailed evaluation of the expected leakage from containment and the associated consequences. The increased risk due to increasing the intervals between containment leakage tests was also evaluated. The NUREG used a statistical approach to determine that the increase in the expected dose to the public due to decreasing the testing frequency is extremely low. NUREG-1493 also concluded that a small increase is justifiable in comparison to the benefits from decreasing the testing frequency. The primary benefit is in the reduction in occupational radiation exposure.

(2) Does not create the possibility of a new or different kind of accident from any accident previously evaluated.

The TS amendment does not create the possibility of a new or different kind of accident from any accident previously evaluated.

The proposed TS amendment incorporates the performance-based testing approach
