

contaminant levels above the ROD cleanup standards. Following completion of these elements of the cleanup, permanent deed and land use restrictions were to be implemented to control land use, to restrict development of the Site and to prohibit installation of ground water wells.

U.S. EPA issued a Unilateral Administrative Order (UAO) to PRPs September 24, 1993. During an October 28, 1994 meeting attended by representatives of U.S. EPA, MDEQ and the PRP technical committee and by follow-up letter dated December 2, 1994 responsible party representatives requested U.S. EPA and MDEQ to consider an alternate cleanup option for remediation of contaminated soil and sediment and contaminated groundwater. In addition, the Predesign Report submitted in March 1995 included a contingency proposal for modification of the groundwater remedy, if necessary, following assessment of monitoring results.

Following public review of and comment upon the proposed changes to remedial action at the Site, the ROD was amended on October 24, 1995. The amended ROD specified a revised Remedial Action (RA) for the Site soils/sediments and groundwater based on the RI and predesign data and reevaluation of the cleanup standards for soil and groundwater.

An Amended ROD was signed on October 24, 1995. The major components of this remedy include:

- Excavation of contaminated soil and sediment from the central site area and Slocum Drain and transportation to an off-site facility for appropriate treatment/disposal.
- Excavation of the water-bearing zones in the area of highest groundwater contamination and off-site disposal of the excavated materials.
- Implementation of a groundwater monitoring program and implementation of site deed restrictions on the installation of drinking water wells until all cleanup standards have been met and maintained.

Activities at the Site were consistent with the amended ROD and the RD/RA statement of work for design and construction. The RD Report, including a Quality Assurance Project Plan (QAPP), incorporated all necessary U.S. EPA and State quality assurance and quality control (QA/QC) procedures and protocol. U.S. EPA analytical methods were used for all validation and monitoring samples during RA activities. All procedures and protocol followed for soil, groundwater, and air sample during the RA are documented in the RD Report and were conducted

through a participating Contract Laboratory Program (CLP) in accordance with the statement of work.

A Close Out Report was signed on September 18, 1996, which stated that the Site meets all site completion requirements as specified in OSWER Directive 9320.2-3c, *Procedures for Completion and Deletion of National Priorities Sites and Update*. Specifically, confirmatory sampling verifies that the Site has achieved the ROD cleanup objective, that all soil, sediment, and groundwater cleanup standards have been met and that all cleanup actions specified in the amended ROD have been implemented. Furthermore, U.S. EPA has removed all other contamination detected to acceptable levels. Confirmatory groundwater sampling and backfilling and grading the Site with unaffected Site soils provide further assurance that the Site no longer poses unacceptable threats to human health or the environment. No further activity is planned at the Site.

A five-year review pursuant to OSWER Directive 9355.7-02 ("Structure and Components of Five-Year Reviews") will not be conducted at the Site. There are no hazardous Substances that remain at the Site above health-based levels, U.S. EPA will not conduct a five-year review.

EPA, with concurrence from the State of Michigan, has determined that responsible parties have implemented all appropriate responses under CERCLA at the Berlin and Farro Liquid Incineration Site, and no further CERCLA response actions are appropriate in order to provide protection of human health and environment. Therefore, EPA proposes to delete the Site from the NPL.

Dated: December 9, 1997.

BILLING CODE 6560-50-P

---

## FEDERAL EMERGENCY MANAGEMENT AGENCY

### 44 CFR Part 67

[Docket No. FEMA-7243]

### Proposed Flood Elevation Determinations

**AGENCY:** Federal Emergency Management Agency, FEMA.

**ACTION:** Proposed rule.

**SUMMARY:** Technical information or comments are requested on the proposed base (1% annual chance) flood

elevations and proposed base flood elevation modifications for the communities listed below. The base flood elevations are the basis for the floodplain management measures that the community is required either to adopt or to show evidence of being already in effect in order to qualify or remain qualified for participation in the National Flood Insurance Program (NFIP).

**DATES:** The comment period is ninety (90) days following the second publication of this proposed rule in a newspaper of local circulation in each community.

**ADDRESSES:** The proposed base flood elevations for each community are available for inspection at the office of the Chief Executive Officer of each community. The respective addresses are listed in the following table.

**FOR FURTHER INFORMATION CONTACT:** Frederick H. Sharrocks, Jr., Chief, Hazard Identification Branch, Mitigation Directorate, 500 C Street, SW., Washington, DC 20472, (202) 646-2796.

**SUPPLEMENTARY INFORMATION:** The Federal Emergency Management Agency (FEMA or Agency) proposes to make determinations of base flood elevations and modified base flood elevations for each community listed below, in accordance with section 110 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4104, and 44 CFR 67.4(a).

These proposed base flood and modified base flood elevations, together with the floodplain management criteria required by 44 CFR 60.3, are the minimum that are required. They should not be construed to mean that the community must change any existing ordinances that are more stringent in their floodplain management requirements. The community may at any time enact stricter requirements of its own, or pursuant to policies established by other Federal, state or regional entities. These proposed elevations are used to meet the floodplain management requirements of the NFIP and are also used to calculate the appropriate flood insurance premium rates for new buildings built after these elevations are made final, and for the contents in these buildings.

### National Environmental Policy Act

This proposed rule is categorically excluded from the requirements of 44 CFR Part 10, Environmental Consideration. No environmental impact assessment has been prepared.

**Regulatory Flexibility Act**

The Associate Director, Mitigation Directorate, certifies that this proposed rule is exempt from the requirements of the Regulatory Flexibility Act because proposed or modified base flood elevations are required by the Flood Disaster Protection Act of 1973, 42 U.S.C. 4104, and are required to establish and maintain community eligibility in the National Flood Insurance Program. As a result, a regulatory flexibility analysis has not been prepared.

**Regulatory Classification**

This proposed rule is not a significant regulatory action under the criteria of section 3(f) of Executive Order 12866 of

September 30, 1993, Regulatory Planning and Review, 58 FR 51735.

**Executive Order 12612, Federalism**

This proposed rule involves no policies that have federalism implications under Executive Order 12612, Federalism, dated October 26, 1987.

**Executive Order 12778, Civil Justice Reform**

This proposed rule meets the applicable standards of section 2(b)(2) of Executive Order 12778.

**List of Subjects in 44 CFR Part 67**

Administrative practice and procedure, Flood insurance, Reporting and recordkeeping requirements.

Accordingly, 44 CFR part 67 is proposed to be amended as follows:

**PART 67—[AMENDED]**

1. The authority citation for part 67 continues to read as follows:

**Authority:** 42 U.S.C. 4001 *et seq.*; Reorganization Plan No. 3 of 1978, 3 CFR, 1978 Comp., p. 329; E.O. 12127, 44 FR 19367, 3 CFR, 1979 Comp., p. 376.

**§ 67.4 [Amended]**

2. The tables published under the authority of § 67.4 are proposed to be amended as follows:

State	City/town/county	Source of flooding	Location	#Depth in feet above ground. *Elevation in feet (NGVD)	
				Existing	Modified
Alabama .....	Huntsville (City), Madison County.	Tributary 1 to Dry Creek 2	At confluence with Dry Creek 2 .....	None	*705
		Tributary 3 to Dry Creek 2	Backwater area surrounding intersection of Nick Fitchard Road and Bob Wade Lane.	None	*764
		Tributary 4 to Dry Creek 2	At confluence with Dry Creek 2 .....	None	*770
		Tributary to Knox Creek ...	Approximately 500 feet upstream of Wall Triana Highway.	None	*744
		Piney Creek .....	At Capshaw Road .....	None	*752
			At Roberts Road .....	None	*572
