

SUMMARY: The Department of Energy (DOE) hereby provides notice as required by 10 CFR Part 1022, to conduct site characterization activities within the 100-year floodplain of the San Juan River at the Shiprock, New Mexico UMTRA site, with possible impacts to wetlands. The site is located within the boundaries of the Navajo Indian Reservation. Activities are scheduled to occur in the late summer and fall of 1998. Characterization activities are required to determine ground water chemistry and flow patterns that will assist the DOE in selecting a ground water remedial action strategy for the site in accordance with 40 CFR 192, "Health and Environmental Protection Standards for Uranium and Thorium Mill Tailings."

DATES: Written comments are due to the address below no later than July 8, 1998.

ADDRESSES: Written comments should be addressed to Audrey Berry, U.S. Department of Energy—Grand Junction Office, 2597 B3/4 Road, Grand Junction, Colorado; or transmitted electronically by E-mail via Internet to "Audrey.Berry@gjpomail.doegipo.com;" or by facsimile at (970) 248-6040.

FOR FURTHER INFORMATION ON THIS PROPOSED ACTION, CONTACT: Don Metzler, Project Manager, U.S. Department of Energy, Grand Junction Office, 2597 B3/4 Road, Grand Junction, Colorado 81503, Telephone 1-970-248-7612 or 1-800-399-5618, E-mail Don.Metzler@gjpomail.doegipo.com.

FOR FURTHER INFORMATION ON GENERAL DOE FLOODPLAIN/WETLANDS

ENVIRONMENTAL REVIEW REQUIREMENTS, CONTACT: Carol M. Borgstrom, Director, Office of NEPA Policy and Assistance (EH-42), U.S. Department of Energy, 1000 Independence Avenue, SW, Washington, DC 20585, (202) 586-4600 or (800) 472-2756.

SUPPLEMENTARY INFORMATION: Under E.O. 11988, Floodplain Management, and 10 CFR 1022, Compliance with Floodplain/Wetlands Environmental Review Requirements, notice is given that DOE is planning characterization activities in the San Juan River 100-year floodplain north and east of the Shiprock UMTRA site.

Site characterization activities will include the installation of additional monitoring wells and a surface water distribution system. A typical monitoring well can be installed in one to three days with an average disturbed area measuring 30' x 30'. Access to the floodplain will be predominantly using already established roads and trails. Disturbances are expected to be less than two acres. The surface water distribution system will involve

diverting some water that is feeding wetland areas. Because the activities are located within the Navajo reservation, all proposed activities will be coordinated through the Navajo Nation and other federal and state agencies including the U.S. Army Corps of Engineers, U.S. Fish and Wildlife Service, and the New Mexico State Historic Preservation Officer.

The area proposed for activities under this assessment was disturbed in the mid 1980s during excavation activities associated with the removal of mill tailings in the floodplain. Unimproved roads, grazing, and monitoring wells are activities that have historically occurred, or are ongoing, in the area of the proposed action. A floodplain/wetlands assessment was included as Appendix J, Volume 2, in the Environmental Assessment of Remedial Action at the Shiprock Uranium Mill Tailings Site, Shiprock, New Mexico (May 1984). The extent of disturbance addressed under the 1984 assessment is considerably more than the disturbance that would transpire under the proposed action. However, the 1984 assessment is not considered sufficient due to the age of the document and regulatory changes since it was completed. Consequently, an updated floodplain/wetlands assessment will be prepared.

Once all regulatory actions are complete, a Statement of Findings will be published in the **Federal Register**.

Issued in Albuquerque, New Mexico on June 12, 1998.
