## NUCLEAR REGULATORY COMMISSION

### Agency Information Collection Activities: Proposed Collection; Comment Request

**AGENCY:** U.S. Nuclear Regulatory Commission (NRC).

**ACTION:** Notice of pending NRC action to submit an information collection request to OMB and solicitation of public comment.

**SUMMARY:** The NRC is preparing a submittal to OMB for review of continued approval of information collections under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35).

Information pertaining to the requirement to be submitted:

1. *The title of the information collection:* 10 CFR Part 70—Domestic Licensing of Special Nuclear Material.

2. *Current OMB approval number:* 3150-0009.

3. *How often the collection is required:* Required reports are collected and evaluated on a continuing basis as events occur. Applications for new licenses and amendments may be submitted at any time. Renewal applications are submitted every five years. Applications for renewal for certain major fuel cycle facilities are submitted every ten years, with updates of the safety demonstration section submitted every two years. Nuclear material control and accounting information is submitted in accordance with specified instructions. Nuclear criticality safety training program information pursuant to DG-3008 is submitted with the application or renewal.

4. *Who is required or asked to report:* Applicants for and holders of specific NRC licenses to receive title to, own, acquire, deliver, receive, possess, use, or initially transfer special nuclear material.

5. *The number of annual responses:* 1,138.

6. *The number of hours needed annually to complete the requirement or request:* 81,575 (an average of approximately 67.3 hours per response for applications and reports, plus approximately 23.6 hours per recordkeeper).

7. *Abstract:* 10 CFR Part 70 establishes requirements for licenses to own, acquire, receive, possess, use, and transfer special nuclear material. Draft Regulatory Guide DG-3008 provides guidance on an acceptable nuclear criticality safety training program. The information in the applications, reports

and records is used by NRC to make licensing and other regulatory determinations concerning the use of special nuclear material. The revised estimate of burden reflects an increase primarily because of the addition of requirements for documentation for termination or transfer of licensed activities.

Submit, by April 27, 1998, comments that address the following questions:

1. Is the proposed collection of information necessary for the NRC to properly perform its functions? Does the information have practical utility?
2. Is the burden estimate accurate?
3. Is there a way to enhance the quality, utility, and clarity of the information to be collected?
4. How can the burden of the information collection be minimized, including the use of automated collection techniques or other forms of information technology?

A copy of the draft supporting statement may be viewed free of charge at the NRC Public Document Room, 2120 L Street, NW (lower level), Washington, DC. OMB clearance requests are available at the NRC worldwide web site (<http://www.nrc.gov>) under the FedWorld collection link on the home page tool bar. The document will be available on the NRC home page site for 60 days after the signature date of this notice.

## NUCLEAR REGULATORY COMMISSION

### Proposed Generic Communication; Laboratory Testing of Nuclear-Grade Activated Charcoal (M97978)

**AGENCY:** Nuclear Regulatory Commission.

**ACTION:** Notice of opportunity for public comment.

**SUMMARY:** The Nuclear Regulatory Commission (NRC) is proposing to issue a generic letter concerning the laboratory testing of nuclear-grade activated charcoal that is used in the safety-related air-cleaning units of engineered safety feature ventilation systems of nuclear power plants to reduce the potential onsite and offsite consequences of a radiological accident by adsorbing iodine. The purpose of the proposed generic letter is to: (1) Alert addressees that the NRC has determined that testing nuclear-grade activated charcoal to standards other than American Society for Testing and Materials (ASTM) D3803-1989, "Standard Test Method for Nuclear-Grade Activated Carbon," does not provide assurance for complying with their current licensing basis as it relates to the dose limits of General Design Criterion (GDC) 19 of Appendix A to 10 CFR Part 50 and Subpart A of 10 CFR Part 100, and that ASTM D3803-1989 should be used for both new and used charcoal because it allows for accurately monitoring the degradation of the charcoal over time; (2) request that addressees determine whether their technical specifications (TS) reference ASTM D3803-1989 for charcoal filter laboratory testing and if not, either amend their TS to reference ASTM D3803-1989 or propose an alternative test protocol and provide the requested information; (3) alert addressees of NRC intent to exercise enforcement discretion under certain conditions; and (4) require that addressees submit written responses to this generic letter.
