SUPPLEMENTARY INFORMATION: Research to develop improved methods for measuring lead in paint films, dust, and soil samples is authorized by section 1052(3) of the Residential Lead-Based Paint Hazard Reduction Act of 1992 (Title X of the Housing and Community Development Act of 1992).

The Midwest Research Institute will provide oversight, maintenance and storage for the HUD owned lead-based paint archives. The lead-based paint archives consist of approximately 150 real world housing components which are lead-based painted. These components have served as the basis for the development of Performance Characteristic Sheets (PCS) for use with field-portable X-ray Fluorescence (XRF) instruments, which are currently the most common technology utilized for performing lead-based paint inspections. PCSs are utilized in conjunction with an XRF to facilitate the accurate interpretation of data generated by that specific XRF instrument. Use of the XRF, its manufacturer's instructions, and the PCS are important elements necessary for conducting a lead-based paint inspection in conjunction with the HUD Guidelines for the Evaluation and Control of Lead Based Paint Hazards in Housing (HUD, 1995, with a 1997 revision of chapter 7 on inspection).

The lead-based paint archives will continue to be used for the testing of XRF instruments, and will also be used for the testing of alternative technologies developed for the identification of lead-based paint (e.g., spot test kits). The use of existing lead-based paint archive components for evaluating testing instrumentation is an important part of ongoing efforts to develop new, improved, and cost-effective methods for accurately identifying and quantifying lead-based paint in target housing. The results of these efforts will continue to support HUD's goal of reducing the incidence of childhood lead poisoning.

The Midwest Research Institute (MRI) will continue to provide oversight and coordination with manufacturers and research entities on the testing of new and existing technologies for the identification of lead-based paint. In addition, MRI will ensure that the lead-
