## NUCLEAR REGULATORY COMMISSION

### Draft Regulatory Guide; Issuance, Availability

The Nuclear Regulatory Commission has issued for public comment a draft of a guide planned for its Regulatory Guide Series. This series has been developed to describe and make available to the public such information as methods acceptable to the NRC staff for implementing specific parts of the Commission's regulations, techniques used by the staff in evaluating specific problems or postulated accidents, and data needed by the staff in its review of applications for permits and licenses.

The draft guide, temporarily identified by its task number, DG-1074 (which should be mentioned in all correspondence concerning this draft guide), is titled "Steam Generator Tube Integrity." The guide is intended for Division 1, "Power Reactors." This draft guide is being developed to describe methods acceptable to the NRC staff for monitoring and maintaining the integrity of the steam generator tubes at operating pressurized water reactors.

The NRC staff is working with industry to resolve issues with a document prepared by the Nuclear Energy Institute, NEI 97-06, "Steam Generator Program Guidelines."<sup>1</sup> NEI's chief objective with NEI 97-06 is for pressurized water reactor (PWR) licensees to evaluate their existing steam generator programs and, where necessary, to revise or strengthen program attributes to meet the intent of the NEI 97-06 guidelines. The NEI 97-06 guidelines are intended to improve both the quality and the consistency of steam generator programs throughout the industry. Currently, technical differences remain between the industry and the staff, as well as issues regarding the appropriate regulatory framework for implementing the NEI guidelines.

Previous draft versions of DG-1074 have been made publicly available to support technical interactions with industry and for better understanding of the technical differences between the
