

Porpoise Bycatch Estimates. Copies of the information may also be requested from Richard Merrick, Northeast Fisheries Science Center, 166 Water St., Woods Hole, MA 02543; or Doug Beach, Northeast Regional Office (F/NER3), One Blackburn Dr., Gloucester, MA 01930.

FOR FURTHER INFORMATION CONTACT: Donna Wieting, Office of Protected Resources, NMFS, at (301) 713-2322, ext. 157; Richard Merrick, Northeast Fisheries Science Center, (508) 495-2291; or Doug Beach, Northeast Region, (978) 281-9254.

SUPPLEMENTARY INFORMATION: NMFS implemented a plan in December of 1998 to reduce harbor porpoise bycatch in the Northeast sink gillnet fishery to below the Potential Biological Removal (PBR) level for that stock. The Harbor Porpoise Take Reduction Plan includes a combination of management measures including fishery closures and gear modifications. The Harbor Porpoise Take Reduction Plan aims to reduce New England harbor porpoise takes through two types of gillnet fishery closures: (1) Closures to all vessels except those using acoustic deterrent devices (or "pingers") and (2) In a limited number of cases, complete closures to all sink gillnet gear.

NMFS is hereby making available harbor porpoise incidental take levels for 1998 and the months of January through April of 1999, as estimated by NMFS' Northeast Fisheries Science Center.

For 1998, the total estimated bycatch of harbor porpoise was 778 animals. For January through April of 1999, total estimated bycatch of harbor porpoise was 157 animals (104 in the Gulf of Maine and 53 in the Mid-Atlantic). NMFS considers the numbers to be the best estimates of harbor porpoise mortality in gillnet fisheries in the Gulf of Maine and the Mid-Atlantic during the time frames specified.

NMFS will make information publicly available on harbor porpoise incidental take on a calendar-year quarterly basis through the end of the year 2001. Notification of the information availability will be published in the **Federal Register** on an annual basis.

This information along with other material provided by NMFS staff will be reviewed by the Gulf of Maine Harbor Porpoise Team to evaluate what further action may be necessary for the coming year.

SUPPLEMENTARY INFORMATION: The subject amendment to Permit No. 848-1335, issued on July 10, 1997 (62 FR 32586) is requested under the authority of the Marine Mammal Protection Act of 1972, as amended (16 U.S.C. 1361 *et seq.*), the Regulations Governing the Taking and Importing of Marine Mammals (50 CFR part 216), the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*), and the regulations governing the taking, importing, and exporting of endangered and threatened species (50 CFR parts 222-226).

Permit No. 848-1335 authorizes the permit holder to: to conduct population assessment, disease assessment, recovery actions, and pelagic ecology studies of Hawaiian monk seals (*Monachus schauinslandi*) at all locations within the Hawaiian Archipelago and at Johnston Atoll, through May 31, 2002. Research methods include: observation and monitoring; capture; physical and chemical restraint; flipper tagging and retagging; instrumentation; bleach marking; measuring and weighing; blood and tissue sampling; swabbing; biopsy sampling (blubber); lavage; capture for the purpose of rehabilitation and release to the wild; experimental medical treatment; and relocation or removal of up to 10 adult male Hawaiian monk seals from the Northwestern Hawaiian Islands, in the event that such seals are known to cause mortality to nursing or weaned pups.

The Permittee is now requesting to amend Activity IV, Task 7 of the permit to increase the number of animals authorized to be taken from 30 to 100 seals annually for the duration of the permit. In addition, authorization is requested to: (1) allow retrieval of time-depth recorders (TDRs) from Hawaiian monk seals; (2) provide additional take by instrumentation (including sonic tags) to support continued research into the foraging ecology of Hawaiian monk seals; and (3) allow an additional procedure, isotopic water dilution, to estimate the body composition as an indication of foraging success and condition of study subjects. Activity IV, Task 7 currently authorizes seals to be captured, sedated, blood sampled, and tagged with various instrument packages up to two times each (once to apply the instrument package and once to remove it).

For this amendment, some of these seals may be taken up to three times: Once to apply a VHF transmitter; a second time to apply a TDR or satellite-linked time-depth recorder (SLTDR), and a third time to retrieve the TDR/SLTDR. The increased takes are necessary to: (1) remove time-depth recorders (TDRs) from weaned Hawaiian monk seal pups, and (2) continue research on Hawaiian monk seal foraging ecology in future years.

In compliance with the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*), an initial determination has been made that the activity proposed is categorically excluded from the requirement to prepare an environmental assessment or environmental impact statement.

Concurrent with the publication of this notice in the **Federal Register**, NMFS is forwarding copies of this application to the Marine Mammal Commission and its Committee of Scientific Advisors.

Dated: August 24, 1999.
