Stampede Powerplant is a feature of the Washoe Project authorized by Congress in 1956 and is located on the Little Truckee River in Sierra County, California. The powerplant has a maximum operating capability of 3,650 kW with an estimated annual generation of 11 million kWh. Since Stampede Powerplant has an installed capacity of less than 20,000 kW and generates less than 100 million kWh annually for sale, the proposed rates constitute a minor rate adjustment. Western has determined that it is not necessary to hold a public information or comment forum for this proposed minor rate adjustment (10 CFR 903). After Western reviews the comments received, it will recommend the proposed rates (and as amended) for approval on an interim basis by the Department of Energy (DOE) Deputy Secretary.

Legal Authority

These nonfirm energy rates for Stampede are established under the DOE Organization Act, 42 U.S.C. 7101-7352; the Reclamation Act of 1902, ch. 1093, 32 Stat. 388, as amended and supplemented by subsequent enactments, particularly section 9(c) of the Reclamation Project Act of 1939, 43 U.S.C. 485h(c); and other acts specifically applicable to the project involved.

By Amendment No. 3 to Delegation Order No. 0204-108, published November 10, 1993 (58 FR 59716), the Secretary of Energy delegated (1) the authority to develop long-term power and transmission rates on a nonexclusive basis to Western's Administrator; and (2) the authority to confirm, approve and place into effect on a final basis, to remand, or to disapprove such rates to FERC. In Delegation Order No. 0204-172, effective November 24, 1999, the Secretary of Energy delegated the authority to confirm, approve and place such rates into effect on an interim basis to the Deputy Secretary. Existing DOE procedures for public participation in power rate adjustments (10 CFR part 903) became effective on September 18, 1985 (50 FR 37835).

Availability of Information

The rate brochure, studies, comments, letters, memorandums, and other documents made or kept by Western in developing the proposed rates to sell nonfirm energy from Stampede are available for inspection and copying at the Sierra Nevada Customer Service Regional Office, at 114 Parkshore Drive, Folsom, California.

Regulatory Procedural Requirements

Regulatory Flexibility Analysis

The Regulatory Flexibility Act of 1980 (5 U.S.C. 601, *et seq.*) requires Federal agencies to perform a regulatory flexibility analysis if a final rule is likely to have a significant economic impact on a substantial number of small entities and there is a legal requirement to issue a general notice of proposed rulemaking. Western has determined that this action does not require a regulatory flexibility analysis since it is a rulemaking involving rates or services for public property.

Environmental Compliance

In compliance with the National Environmental Policy Act (NEPA), of 1969, 42 U.S.C. 4321, *et seq.*, Council on Environmental Quality Regulations (40 CFR parts 1500-1508); and the DOE NEPA Regulations (10 CFR part 1021), Western has determined that this action is categorically excluded from the preparation of an environmental assessment or an environmental impact statement.

Determination Under Executive Order 12866

Western has an exemption from centralized regulatory review under Executive Order 12866; accordingly, no clearance of this notice by the Office of Management and Budget is required.

Small Business Regulatory Enforcement Fairness Act

Western has determined that this rule is exempt from congressional notification requirements under 5 U.S.C. 801 because the action is a rulemaking of particular applicability relating to rates or services and involves matters of procedure.
