BILLING CODE 4140-01-M

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Prospective Grant of Exclusive License: Development of Instruments for Diagnostic and Surgical Applications Based on Spectroscopic and Hyperspectral Imaging Techniques

AGENCY: National Institutes of Health,
Public Health Service, DHHS.

ACTION: Notice.

SUMMARY: This is notice, in accordance with 35 U.S.C. 209(c)(1) and 37 CFR 404.7(a)(1)(i), that the National Institutes of Health (NIH), Department of Health and Human Services, is contemplating the grant of an exclusive license worldwide to practice the invention embodied in: U.S. Patent Application Serial No. 09/182,898, entitled "Multispectral/Hyperspectral Medical Instrument", filed October 30, 1998; U.S. Patent Application Serial No. 09/389,342 entitled "Infrared Balloon Probe" filed September 2, 1999, and US Provisional Patent Application SN 60/142,068, entitled "Dual Modality Imaging Apparatus", filed July 2, 1999, to HyperMed, Inc. having a place of business in Chestnut Hill, Massachusetts. The United States of America is an assignee to the patent rights of these inventions.

The contemplated exclusive license may be limited to the development of diagnostic instruments, devices, compositions and methods, to be used for diagnostics based on the spectral differentiation between healthy and unhealthy/damaged tissue.

DATES: Only written comments and/or applications for a license which are received by the NIH Office of Technology Transfer on or before July 3, 2000 will be considered.

ADDRESSES: Requests for a copy of the patent application, inquiries, comments and other materials relating to the contemplated license should be directed to: Uri Reichman, Ph.D., Technology Licensing Specialist, Office of Technology Transfer, National Institutes of Health, 6011 Executive Boulevard, Suite 325, Rockville, MD 20852-3804; Telephone: (301) 496-7056, ext. 240; Facsimile: (301) 402-0220; E-mail: reichmau@od.nih.gov. A signed

Confidential Disclosure Agreement will be required to receive copies of the patent application.

SUPPLEMENTARY INFORMATION: The three patent applications describe medical imaging technologies and related instrumentation and their application for surgical "real time" diagnostics. The inventions are based on the difference of spectral images between normal and damaged (e.g. ischemic or cancerous) tissues due to chemical differences between them. Patent Application 09/182,898 describes a surgical and diagnostic camera, based on visible and near infrared hyperspectral imaging technique. This instrument can be used during heart surgery to distinguish between ischemic and normal tissues, or for cancer surgery applications to determine tumor margins during resective surgery. Patent Application 09/389,342 describes a device for use in the field of medical endoscopy. It is a fiber-optics imaging device based on a balloon probe that has been adapted to obtain spectroscopic information in the infrared spectral region. It can be used, for example, for the determination of the chemical composition of arterial plaques in situ. Patent application 60/142,068 describes a Dual Modality Imaging Apparatus and method comprising means of fusing thermal image and hyperspectral data. While the hyperspectral data provides information about tissue status and viability, thermal imaging provides information related to blood flow.

The prospective exclusive license will be royalty-bearing and will comply with the terms and conditions of 35 U.S.C. 209 and 37 CFR 404.7. The prospective exclusive license may be granted unless, within 90 days from the date of this published Notice, NIH receives written evidence and argument that establishes that the grant of the license would not be consistent with the requirements of 35 U.S.C. 209 and 37 CFR 404.7.

Properly filed competing applications for a license filed in response to this notice will be treated as objections to the contemplated license. Comments and objections submitted in response to this notice will not be made available for public inspection, and, to the extent permitted by law, will not be released under the Freedom of Information Act, 5 U.S.C. 522.

Dated: March 24, 2000.

Jack Spiege,

*Director, Division of Technology,
Development and Transfer, Office of
Technology Transfer.*

BILLING CODE 4140-01-M

DEPARTMENT OF THE INTERIOR

Bureau of Indian Affairs

Historical Analysis of Individual Indian Money Accounts

AGENCY: Bureau of Indian Affairs (BIA), Interior.

ACTION: Notice of public meetings and opportunity for comment.

SUMMARY: The Department of the Interior manages property it holds in trust for individual Indians and maintains revenue, in Individual Indian Monies (IIM) accounts, that accrues to individuals holding an interest in trust lands. The Department recognizes that as a result of past weaknesses in its accounting and information systems, IIM account holders have not always had sufficient information to be able to ascertain whether income from their trust assets was properly credited, maintained, and distributed to and from their IIM accounts. As directed by Congress, the Department is continuing development of a reconciliation process to evaluate the reliability of past account activity. This notice initiates an information gathering process with IIM account beneficiaries, and the public, to comply with Congressional directives to determine the most reasonable methods for providing accountholders with information to evaluate their accounts and to determine whether there are discrepancies due to past management practices.

DATES: Written comments will be collected until June 30, 2000. The Department will also conduct public meetings to collect views, as outlined in this notice, at the following dates and locations:

Navajo Region

Western Agency

April 24, 2000; 10:00 A.M.; Western Agency, BIA, Building #407, Warrior Drive, Tuba City, Arizona

Chinle Agency

April 25, 2000; 10:00 A.M.; Chinle Agency, BIA, Bldg #136, Navajo Route 7, Chinle, Arizona

Fort Defiance Agency

April 26, 2000; 10:00 AM; Fort Defiance Agency, BIA, Bldg #40, Blue Canyon Road, Fort Defiance, Arizona

Shiprock Agency

April 27, 2000; 10:00 AM; Ship Rock Agency, BIA, N Highway 666, Shiprock, New Mexico

Eastern Navajo Agency

April 28, 2000; 10:00 AM; Eastern Navajo Agency, BIA, Bldg #222, Navajo Route 9, Crownpoint, New Mexico

Western Region*Colorado River Agency*

April 25, 2000; 5:00 PM; Colorado River Agency Conference Room, Agency Road, Building 3, Parker, Arizona

Fort Apache Agency

April 25, 2000; 9:00 AM; Fort Apache Agency Annex Conference Room, State Route 73, West Elm Street, Whiteriver, Arizona

Fort Yuma Agency

April 29, 2000; 2:00 PM; Cocopah Tribal Chambers, County 15, Avenue G, Somerton, Arizona

Fort Yuma Agency

April 29, 2000; 10:00 AM; Quechan Community Center, 604 Picacho Road, Winterhaven, California

Hopi Agency

April 27, 2000; 10:00 AM; Hopi Agency Conference Room, Highway 264, One Main Street, Keams Canyon, Arizona

Papago Agency

April 29, 2000; 9:00 AM; Tohono O'odham Legislative Council, Main Street, (Downtown Sells), South of State Route 86, Sells Arizona

Pima Agency

May 3, 2000; 9:00 AM; Gila River Sprung (White Tent), 5550 W. Wild Horse Pass (Casino) I-10 and Maricopa Road, Chandler, Arizona

Salt River Agency

May 6, 2000; 10:00 AM; Salt River Community Building, 1880 North Longmore, Scottsdale, Arizona

San Carlos Agency

May 3, 2000; 9:00 AM; Apache Gold Casino, Highway 70—5 miles east of Globe, Globe, Arizona

Truxton Agency

April 27, 2000; 1:00 PM; Truxton Canon Field Office Conference Room, 13067 East Highway 66, Valentine, Arizona

Eastern & Western Nevada Agencies

May 6, 2000; 9:00 AM; Atlantis Hotel, 3500 S Virginia Street, Reno, Nevada

ADDRESSES: Written comments or suggestions about the processes that should be undertaken by the Department to meet the stated goals of this notice should be mailed to Bureau of Indian Affairs Office of American Indian Trust, Attention: Director, Loretta Tuell, 1849 C Street, NW, Mail Stop 2472—MIB, Washington, DC 20240.

FOR FURTHER INFORMATION CONTACT: Loretta Tuell, Director, Office of American Indian Trust, at the above address or by telephone at (202) 208-3338.

SUPPLEMENTARY INFORMATION:**I. Background**

Note: Further background information, including historic information on IIM accounts, to aid comments on this notice will be available at these locations prior to the

scheduled meeting times. Please contact your preferred location for further.

Currently, approximately 11 million acres of land are administered in trust by the Secretary of the Interior for the benefit of more than 300,000 individual Indian beneficiaries. In 1997 Departmental auditors estimated approximately \$300 million is generated annually from the management of the lands and passes through the IIM accounts. This is a significant expansion since the 1955 GAO Audit report which reported that in 1950 there were only 88,000 IIM accounts and in fiscal year 1955 approximately \$66 million was handled within the IIM system. As outlined below, this dramatic growth in beneficiaries since the inception of the IIM system overburdened the existing accounting and distribution systems of the Department. By Congressional mandate, those systems are currently being modernized. However, the Department recognizes, as has the General Accounting Office, that it is not feasible or practicable to re-create past transactions with the same precision that the Department expects the new systems to provide when fully operational.

The Department's obligation to reconcile accounts was initially raised by Congress in the 1987 Supplemental Appropriations Act; and Congress has continued to oversee the development of various options to carry out this obligation. The American Indian Trust Fund Management Reform Act of 1994, 25 U.S.C. 162a. *et seq.*, & 4011, *et seq.*, (the Act or the 1994 Act), anticipates that the Bureau of Indian Affairs will complete a reconciliation of IIM accounts that provides account holders "with a fair and accurate accounting" of trust accounts. 25 U.S.C. 4043. The Act also required the Department account for fund balances and commence "periodic, timely reconciliations to assure the accuracy of accounts." 25 U.S.C. 162a & 4011. The combined effect of these provisions is a requirement to develop a reconciliation process to determine the reliability of account balances. Pursuant to Congress' mandate in the Act, the Department has been designing and installing new accounting and trust management systems to modernize and improve the administration of IIM accounts. The Department believes the new systems and procedures will provide account holders with accurate information about current transactions that affect the balances of their account.

In 1887, Congress enacted the Indian General Allotment Act of 1887, 24 Stat. 388. The Allotment Act authorized the President to allot portions of reservation

land to individual Indians. Title to the allotted land was to remain with the United States in trust for at least 25 years, after which it was to be conveyed in fee to the Indian beneficiary. The Allotment Act resulted in a loss of over 90 million acres of Indian-held land, primarily through the distribution to non-Indians of reservation lands remaining after allotment. Land also passed out of the hands of many Indian allottees who received fee title after 25 years through forced sales and the operation of state intestacy laws.

In 1934, Congress enacted the Indian Reorganization Act to protect (and enhance, when possible) the remaining land base of Indian tribes and their members and to permit the tribes to engage in self-government. *See* 25 U.S.C. 452. The Reorganization Act ended the practice of allotment and indefinitely extended the trust period for allotments that had already been made.

Under the Indian General Allotment Act of 1887, 24 Stat. 388, as amended, the Department of the Interior has managed land held in trust for individual Indians which often generates revenue for the beneficial owners. Generally, the primary mechanism for distributing money earned on allotted lands to the beneficiaries has been the IIM account. Historically, funds collected from the use of allotted lands were deposited in either the Federal Treasury or private banks. The funds were then divided based on each individual's proportional interest in the land generating the funds. Each individual's share of the funds was then placed in an IIM account, where it was held until distribution. With certain exceptions, the income was then distributed to the account holder (beneficiary) by a bonded disbursing officer. Funds also have been derived from per capita payments from the Indian Claims Commission, U.S. Court of Claims, and appropriations from legislative claims settlements and were distributed in a similar manner.

As interests in individual allotments continued to pass to subsequent generations, the number of owners of an individual allotment multiplied to the extent that some of the 40, 80, or 160 acre allotments which originally had one owner, today may have hundreds, or even more. While the amount of money generated has increased significantly since the inception of the IIM system, the number of beneficiary accounts has increased at a much greater rate. Today, many of these interests, having been passed through many generations, may entitle the owner to such a small portion of the

proceeds generated that the beneficiary receives only pennies a year.

After the passage of the Act, the Department's Special Trustee conducted an examination of the IIM accounts in order to produce the Strategic Plan required by the Act. The Strategic Plan identified a number of problems with the historic management of the accounts. For example, since the record keeping and distribution of money was historically handled at the local level, multiple accounts could be formed if an individual either owned land in several areas or moved and was serviced at a different BIA office. Moreover, the Department's systems for managing IIM accounts have not kept pace with systems available to the private sector. These problems compounded each other and in the end overwhelmed the system such that the Department has been unable to provide many beneficiaries with basic information such as the source of funds, gains and losses, and periodic statements of account performance. As a result, many beneficiaries have been unable to fairly evaluate the management of their accounts to verify they are receiving their proper share of the income collected through the Department's management of their land interests.

In response to accountholder demands and Congressional findings that the systems must be overhauled, Congress enacted The American Indian Trust Fund Management Reform Act of 1994, PL 103-412, which prescribed specific information that would henceforth be required to be provided to individuals about the Department's management of their accounts. The Department believes the systems currently being developed and implemented will comply with the mandates of the Act.

In 1994 Congress, through passage of the Act, mandated a series of specific reforms to the ongoing management of Indian trust funds. *See* for example, 25 U.S.C. 162a. Once the systems are in place to carry out the duties specified in the Act on an ongoing basis, the Department will undertake a process, likely with the aid of the new systems, to provide required information on accounts back to October 25, 1994. As this will involve different requirements and levels of available information, this period will be addressed within this separate process, not necessarily the one that will be developed from this notice.

Although the requirements of the Act are primarily forward-looking, some of the prospective requirements such as periodic reconciliations and determining accurate cash balances necessarily require some level of

historical investigation. For example, Department audits have revealed discrepancies between the ledges of the Department and the Department of the Treasury, the Department will have to continue work on resolving these discrepancies. The implementation of new systems, in and of themselves, will not provide an analysis of transaction which took place before the passage of the Act. To address investigation of historical discrepancies, the Act built on the Department's process for historically reconciling Tribal Trust Fund accounts, requiring the Special Trustee to "monitor" the process and setting a deadline for its completion. The Act required the Secretary to submit a "reconciliation report" to the relevant congressional committees identifying a balance reconciled as of September 30, 1995 for each Tribal Trust Fund account, the methodology used, attestations of account holders as to whether they accepted the balances as reconciled and if not, a statement outlining efforts the Secretary will undertake to resolve the dispute. *See* 25 U.S.C. 4043 & 4044. Reconciliation reports were submitted in January of 1996.

In contrast to the Tribal trust funds, for which Congress provided a framework for applying the Department's reconciliation process, the Act contains no such guidance for the reconciliation of IIM accounts. At the time the Act was enacted, the Department had not identified a satisfactory methodology for historical IIM reconciliation, given the availability and condition of the records and the high cost of gathering and analyzing relevant documents. The Act simply provided that an IIM reconciliation process would be "monitored" by the Special Trustee to ensure a "fair and accurate accounting" is provided to account holders. 25 U.S.C. 4043. While Congress did not specify the nature of the remedy, the Act does recognize the existence of both the historical problems and ongoing attempts to devise an approach to resolving them. Given the acknowledged problems with past account management systems, and the 1994 Act's intent to resolve the account management deficiencies, the Department wishes to address the fact that these deficiencies may have resulted in account holder losses through the development of a fair, reasonable, and practicable solution. Because the Act does not provide the Department with guidance on what type of process should be used to provide beneficiaries with information about their accounts' histories, the Department

believes Congress left the initial determination of how, and to what extent, it would achieve an accounting or reconciliation of IIM accounts to the Department.

In 1996, the *Cobell v. Babbitt* litigation was filed in the U.S. District Court for the District of Columbia, asserting beneficiaries were due an accounting of their funds. The scope and nature of any such accounting has not yet been fully addressed in the case but the Court has made it clear that it lacks jurisdiction to award damages for losses beneficiaries may have incurred. *See Cobell v. Babbitt*, No. 1:96CV01285, slip op. at 55 (Dec. 21, 1999). In addition, because many beneficiaries have very small account balances or little historical activity, the Department believes it would best serve the interests of the beneficiaries and the United States to develop a methodology to foster compensation without the necessity of case-by-case litigation. Therefore, the Department now proposes beginning an information gathering process with beneficiaries to weigh the costs, benefits, and feasibility or alternative approaches to give IIM account holders reasonable confidence that income from their trust assets was properly credited, maintained, and distributed to and from their IIM accounts before October 25, 1994. In addition, because the Department believes that it is in the best interests of most, if not all beneficiaries to develop a process that not only provides assurance that current balances are reliable, but also provides for a final resolution to past discrepancies discovered, the Department also intends to explore approaches to fairly compensate beneficiaries and finally resolve discrepancies.

The Department notes that, although the goals of this process go beyond the remedies available in the *Cobell* case, the Court has pending before it issues related to the scope and nature of an accounting due beneficiaries. The Department intends to keep the Court apprised of the progress on this process. The Department recognizes that future decisions by the Court may affect this process.

II. Goals

Pursuant to this obligation, this notice is intended to initiate a process with beneficiaries and the public to gather information about available options to enable the Department to determine the best process to meet the following goals:

(1) Develop a methodology, consistent with Congressional directives, to examine past account activity and discover information appropriate to

enable beneficiaries and the Department to evaluate whether income from their trust assets was properly credited, maintained, and distributed to and from their IIM accounts before October 25, 1994;

(2) Explore approaches to fairly compensate beneficiaries and finally resolve discrepancies.

This process is focused on developing a general methodology to investigate IIM account activity in order to provide reasonable information to account holders. This process will not, for example, address allegations of mismanagement, or other allegations of taking, of the underlying property interests. Although the methodology selected may ultimately result in a procedure which includes bringing individualized grievances related to lost income, these grievances will not be addressed within the process outlined in this notice.

III. Factors To Consider in Evaluating Options

Although the Department intends to consider the widest possible range of options for meeting the goals stated above, the Department will be guided by a number of factors in evaluating the reasonableness of each option. Each approach would require some tradeoff among the level of precision of account information provided to beneficiaries, the cost of obtaining and providing information, the impact on BIA's and OST's other responsibilities, and time needed to develop a basis for compensation. It is important that these tradeoffs be considered in evaluating the various options.

In addition, it is important to consider what has been proposed and rejected in the past and what the Department has learned from studying the accounts. Past proposals to perform IIM reconciliation have been dismissed by both Indian groups and Congress as being too expensive for the limited information produced. From 1988 to 1994, the Department, with the aid of Arthur Andersen, investigated the possibility of performing a reconciliation that would develop information on accounts without regard to the size of the account or transaction. Many of these proposals were dismissed by Congress, the Department, and the Intertribal Monitoring Association ("ITMA") as not being worth the cost. For example, in 1995 Congress declined to fund IIM reconciliation tasks and the Appropriations Committee instructed the Department to, "recommend alternative, less costly approaches to the reconciliation and clarify the implications of not reconciling [IIM]

accounts.” H.R. Rep. No. 104–173, at 55. ITMA similarly advocated finding alternatives that will discover the largest discrepancies at the least cost. This experience indicates that the Department should focus on methods that discover discrepancies in the areas that are most reasonably calculated to have had significant problems in the past.

Any approach ultimately selected must also provide a final resolution for both the Department and beneficiaries with regard to the pre-1994 period that is necessary for the Department to fully correct the management of the IIM system into the future. While the level of finality needed may vary according to such issues as the level of precision achieved, it is important to note that a primary consideration for any process selected must be to end uncertainty and achieve finality as to past account activity.

It may well be that accountholders will have differing views on what is necessary to provide them with a satisfactory “accounting.” Those with larger accounts may be more interested in an option which offers great precision, even though achieving the desired level of precision will take a long time and substantial resources. In contrast, accountholders with smaller accounts—those with less than \$100 in income per year, for example—may be satisfied with a methodology that does not yield a precise result but that leads to a fast result with certain assumptions built in to compensate for the reduced precision. As discussed more fully below, it may not be necessary to use the same methodology for all accountholders. Distinctions among accounts may be made based, for example, on the size of the account or the nature of the underlying assets owned by the accountholder.

The approach selected must provide accountholders with confidence that they have been treated fairly. The Department is spending in excess of \$190 million to clean up the trust fund accounts, to install new systems to administer trust resources and trust funds, and to train Departmental officials in meeting their obligations. While the Department is confident it will be able to meet its obligations for the future, it is equally important that this process develop a result that will satisfy accountholders as to the past.

Another factor to be considered is the cost of the process. While achieving the goals of this notice is likely to be expensive regardless of which approach is selected, there is a very large cost range within the various options—from millions of dollars for the sampling or

settlement approach to hundreds of millions or more for a traditional transaction-by-transaction reconciliation for all accounts. As an example, the Department’s current estimates are that it could cost over \$15 million just to locate and organize all documents associated with the transactions of the five named plaintiffs (and 31 related individuals) in the *Cobell* litigation. Using this estimate as a guide, it is reasonable to conclude that merely collecting and organizing—but not analyzing—documents for the approximately 300,000 current accountholders would cost hundreds of millions of dollars.

Closely associated with the overall cost of the process are the cost/benefit considerations of the options. This factor may not be as relevant for large accounts through which tens or even hundreds of thousands of dollars pass each year. This issue more likely arises with respect to the small accounts. If it costs hundreds of dollars, or even more, to undertake a particular analysis for each account, is it cost effective and reasonable to do so for an account that generates \$25 or less per year?

The amount of time that a particular process may take is also a consideration. One option, a transaction-by-transaction reconciliation, for example, would doubtless take many years to complete while others, such as a sampling or settlement process, would take considerably less time. Some accountholders may find that they can achieve a sufficient level of certainty to assess past discrepancies with much less information than others may require, particularly if their account has had little activity or they can reasonably determine their interest in the property was unlikely to produce significant income. In such a case, the accountholder may wish to expedite the process in order to receive fair compensation and resolve this issue. Moreover, a process that takes many years to complete will continue to consume the finite resources of the Bureau which accountholders may believe should be better expended on other programs of benefit to Indian people.

Indeed, the Bureau has broad mandates and responsibilities, including programs of importance to many aspects of the lives of individual Indians and Tribes. These include programs relating to education, law enforcement, probate, realty and trust asset administration, and stewardship of the environment. Regardless of which methodology is employed, it will require the substantial attention of Bureau employees and expenditure of

significant amounts of money. These expenditures likely do not fit within the current budget estimates and staffing of the Department, and therefore the Department will have to seek new funds from Congress to undertake any process finally selected.

IV. Examples of Alternative Approaches

The following alternative approaches are offered merely as examples to illustrate the range of options the Department could consider. This list is not exhaustive, and other constructive alternatives are invited. As previously noted, the Department recognizes it is possible that no single alternative will serve the interests of all types of accountholders. Accordingly, an approach could be designed that integrates principles from various alternatives to provide a combined methodology depending on the characteristics of the accounts, including, size of the account, region of the country, and nature of the underlying assets producing income for the account.

A. Transaction-by-Transaction Reconciliation

The most precise and extensive information possible would be developed by attempting to undertake a transaction-by-transaction reconstruction of each account. This would involve attempting to research all transactions that have occurred in each account in order to try to locate documents which could demonstrate each transaction was correct and then applying appropriate verification procedures to the reconstruction. This would be the most time consuming and expensive approach. For example, the Department’s experience in the *Cobell* litigation suggests that researching and cataloging the millions of documents that would be required would very likely cost hundreds of millions of dollars and take many years. Furthermore, the reconciliation of over one thousand Tribal accounts in the early 1990’s consumed \$20 million and left the final amounts still in question due to missing documents and other difficulties encountered in the reconciliation process. Given the enormous scope and costs of an account-by-account, transaction-by-transaction reconstruction, it is unlikely to expect that the Congress would provide the Department with the staggering appropriations needed to fund such a process.

B. Limited Reconciliation

Another approach could be to perform a more limited reconciliation for a fixed period of time which would allow some reasonable conclusions to be drawn which could then be applied to the remaining historical period. This is similar to the approach taken by Arthur Andersen for the Tribal reconciliation project. Applying this approach to the IIM accounts would include a search for documentation to confirm data that was contained in the electronic systems used from approximately the mid-1980's to the mid-1999's and develop an error rate based on that comparison. This error rate could then be used to estimate whether accountholders had experienced losses and to arrive at a formula for compensation. Although this would be less expensive than a search for all transaction documents, there would still be significant costs associated with this process due to the fact that it involves reconstructing accounts for a particular period of time through extensive research (Arthur Anderson estimated the cost of this approach for the IIM accounts as somewhere between \$108 million and \$281 million).

In 1995, the Inter-Tribal Monitoring Association (ITMA) voiced their opposition to the Arthur Andersen limited reconciliation approach and proposed a limited reconciliation that did not involve reconciling transactions in IIM accounts. The ITMA approach included, in part, reconciliation of balances between the IIM subsidiary ledger and the general ledger control account. ITMA advocated focusing on high volume, high dollar activities in active years; not every lease and every property.

C. Sampling

Another approach could involve using statistical sampling to calculate potential losses. One example methodology could be to use a statistically relevant sample of accounts, transactions, or tracts of land to support a reasonable inference about the accuracy of past account transaction activity.

It may also be useful to mix a sampling approach with a more precise transactional analysis based on the general criteria of the likelihood of loss. Under this approach, a sampling methodology could be used for groups of accounts that are unlikely to have many losses (such as accounts which do not have much income) and a more precise, individualized analysis for accounts where the potential for significant loss is greater. For example,

a loss amount for accounts with historical annual income of less than \$100 may be broadly estimated through sampling, while accounts with annual income over \$100,000 may be analyzed on an individual basis. More extensive sampling could be used for accounts in between these ranges.

D. Analysis of Current Account Data

Another approach might be to use data currently collected and tracked electronically on individual accounts to determine if the past level of account activity is consistent. Since the information that is currently tracked is more extensive than the readily available information on the past, this analysis would both provide some context for the historical information and allow some conclusions to be drawn as to its accuracy.

E. Payment Formula

Another approach could be to define a formula to quantify a "rough justice" payment to each accountholder. Such a formula could be based on a variety of factors, including; the amount of money that has flowed through the account each year, the number of years the account has been open, the location of the account, and the type of assets that produced revenue for the account. To counter-balance the lack of precision in this process, the formulas could be weighted to resolve uncertainty in favor of the beneficiary. While this approach lacks precision in determining past losses, the major advantage of this approach is that it is relatively simple to administer, could be done fairly quickly, and would be the least expensive methodology to implement.

VI. Scope of Comments Requested

The Department is soliciting comment on what factors accountholders consider the most important in developing the proper methodology for meeting the goals stated in this notice.

Dated: March 29, 2000.

Kevin Gover,

Assistant Secretary for Indian Affairs.

BILLING CODE 4310-02-M

DEPARTMENT OF THE INTERIOR

Bureau of Indian Affairs

Indian Gaming

AGENCY: Bureau of Indian Affairs, Interior.

ACTION: Notice of Approval for Amended and Restated Compact.

SUMMARY: Pursuant to Section 11 of the Indian Gaming Regulatory Act of 1988 (IGRA), Pub. L. 100-497, 25 U.S.C. 2710, the Secretary of the Interior shall publish, in the **Federal Register**, notice of approved Tribal-State Compacts for the purpose of engaging in Class III gaming activities on Indian lands. The Assistant Secretary—Indian Affairs, Department of the Interior, through his delegated authority, has approved the Amended and Restated Compact between the Confederated Tribes of the Umatilla Indian Reservation and the State of Oregon, which was executed on December 27, 1999.

DATES: This action is effective April 3, 2000.

FOR FURTHER INFORMATION CONTACT:

George T. Skibine, Director, Office of Indian Gaming Management, Bureau of Indian Affairs, Washington, DC 20240, (202) 219-4066.

Dated: March 17, 2000.

Kevin Gover,

Assistant Secretary—Indian Affairs.

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[Docket No. 4310-DN-P; MT-060-00-1220-AE-003E]

Closure of Unauthorized Roads Within the BLM Hole-in-the-Wall Recreation Area and Unauthorized Two-track Roads on Adjacent BLM Lands, Upper Missouri National Wild and Scenic River, Chouteau County, Montana

AGENCY: Bureau of Land Management, Lewistown Field Office, Lewistown, Montana.

SUMMARY: Notice is hereby given that unauthorized roads within the Hole-in-the-Wall Recreation Area and on adjacent BLM lands, along the Upper Missouri National Wild and Scenic River in Chouteau County, Montana are hereby closed to all types of motorized vehicles, until this notice is rescinded. The unauthorized closed roads are located on BLM lands in T.24 N., R. 13 E., Section 21, Section 22, Section 23, Section 26, Section 27, Section 28, and Section 33 in Chouteau County, Montana. No off-road motorized travel is allowed on the above listed BLM lands. No motorized vehicles will be allowed to drive through or into the fenced developed recreation area. The main access road to the Hole-in-the-Wall Recreation Area will remain open. The purpose of these road closures is to prevent soil erosion, spread of
