**SUPPLEMENTARY INFORMATION:**

*Affected entities:* Entities potentially affected by this action are those who (1) manufacture gasoline, post-refinery component, or detergent additives, (2) blend detergent additives into gasoline or post-refinery component, or (3) transport or receive a detergent additive, gasoline, or post-refinery component.

*Title:* Detergent Gasoline: Certification Requirements for Manufacturers of Detergent Additives; Requirements for Transferors and Transferees of Detergent Additives; Requirements for Blenders of Detergents into Gasoline or Post-refinery Component; Requirements for Manufacturers, Transferors, and Transferees of Gasoline or Post-refinery Component (40 CFR 80—Subpart G), EPA ICR Number 1655.04, OMB Control Number 2060–0275, expiration date: 4–30–00.

*Abstract:* Gasoline combustion results in the formation of engine deposits that contribute to increased emissions. Detergent additives deter deposit formation. The Clean Air Act requires gasoline to contain a detergent additive. The regulations at 40 CFR 80 subpart G specify certification requirements for manufacturers of detergent additives, recordkeeping or reporting requirements for blenders of detergents into gasoline or post-refinery component (any gasoline blending stock or any oxygenate which is blended with gasoline subsequent to the gasoline refining process), and reporting or recordkeeping requirements for manufacturers, transferors, or transferees of detergents, gasoline, or post-refinery component (PRC). These requirements ensure that (1) a detergent is effective before it is certified by EPA, (2) a certified detergent, at the minimum concentration necessary to be effective (known as the lowest additive concentration (LAC), is blended into gasoline, and (3) only gasoline which
