I. The State's Submittal

A. What rule did the State submit?

The rule we are approving for incorporation into the Arizona SIP is MCESD Rule 347, Ferrous Sand Casting. This rule was adopted on March 4, 1998 by the MCESD and submitted to us on August 4, 1999 by the Arizona Department of Environmental Quality. On August 25, 1999, this rule submittal was found to meet the completeness criteria in 40 CFR part 51, appendix V, which must be met before formal EPA review.

B. Are there other versions of this rule?

There is no previous version of MCESD Rule 347 in the SIP. There are no previous submittals on which we have not acted.

C. What is the purpose of the submitted rule?

MCESD Rule 347 limits the amount of volatile organic compounds (VOCs) emitted by organic binder materials and other organic materials used in molds made of sand or other finely divided refractory material in ferrous metal sand casting operations. The emission of VOC is limited to 150 pounds per day or 25 tons per year, unless VOC emissions are controlled by a device with at least 81% capture or by maintaining an organic binder to sand ratio of less than 1.35 to 100 by weight. The TSD has more information about this rule.

II. EPA's Evaluation and Action

A. How is EPA evaluating the rule?

Generally, SIP rules must be enforceable (see section 110(a) of the Act), must require Reasonably Available Control Technology (RACT) for major sources in nonattainment areas (see section 182(a)(2)(A)), and must not relax existing requirements (see sections
