

B. How will the new procedures improve information management?

Chapter V would require that the process of implementing these new requirements be coordinated with the public and that this coordination be integrated into existing site public advisory and coordination activities. Although public information programs have been in existence for some time at DOE sites, these new requirements would require that this information be available to the public. DOE proposes to make available an annual summary report of property released under these requirements at each site. DOE is also proposing to require that the authorized limits used for materials releases, the quantities released, and summaries of the certification and verification information be summarized in the annual site environmental reports (ASERs).

V. Topics on Which Public Comment is Sought

1. Comments are sought on how the economic value of the metal should be factored into a decision regarding its disposition?

2. Comments are solicited on both on the desirable and attainable sensitivity of radiation monitoring devices including survey meters, portable spectrometers, bulk measurement detectors, and truckload monitors. Information on the cost of monitors would also be useful.

Signed this 5th day of October 2000.

David Michaels,

Assistant Secretary, Environment, Safety and Health.
