

soluble analogues of water-insoluble drugs.

In particular, the present invention describes novel analogues derived from 5-aminoflavone (TK2339) compounds. These derivatives have shown good differential activity in the NCI 60-cell line in vitro cancer drug screen with potent and selective cytotoxicity against CAKI-1 and A498 renal, MCF-7 breast, and OVCAR-5 ovarian carcinoma cell lines. In addition, these derivatives have shown in vivo activity against CAKI-1 and A498 renal carcinoma xenographs.

To overcome poor solubility of many members of the flavone class of compounds, a series of more hydrophilic, polar conjugates were prepared which are capable of forming soluble salts. These novel compounds display improved solubility in aqueous solutions over the parent compound without sacrificing potent antitumor activity. Since these compounds possess very favorable pharmaceutical properties, they have the greater potential to be useful in the treatment of human cancers.
