

the harvest to ensure that any commercial use of products created from these species meets the criteria set forth in Section 101(b) of the MMPA.

The information that we propose to continue to collect from Alaska Natives beyond the currently authorized period that expires on October 31, 2001 (under OMB Clearance Number 1018-0066), will be used to improve our decision-making ability by substantially expanding the quality and quantity of harvest and biological data upon which we can base future management decisions. It will provide us with the ability to make inferences about the condition and general health of these populations, and to consider the importance and impacts to these population from such processes as development activities and habitat degradation. Without authority to collect this harvest information, our ability to measure the take of polar bear, sea otter and walrus is inadequate. We believe that mandatory marking, tagging and reporting is essential for us, in concert with Alaska Natives, to be able to improve the quality and quantity of harvest and biological data necessary to base future management decisions. It allows us to make rational, knowledgeable decisions regarding the Native harvest; habitat degradation; and the effects of oil and gas exploration, development, and production planned or underway for areas within the range of these species.

We estimate that the annual burden associated with this request will be 674 hours for each year of the 3-year period of OMB authorization. We calculated this estimated burden based on previous experience suggesting that Alaska Natives annually will take about 2,695 polar bears, sea otter, and Pacific walrus for subsistence and handicraft purposes, and that 15 minutes will be needed to provide the required information for each animal taken.
