BILLING CODE 7537-01-P

NUCLEAR REGULATORY COMMISSION

[Docket Nos. 50-237, 50-249, 50-254 and 50-265]

Exelon Generation Company, LLC; Notice of Consideration of Issuance of Amendment to Facility Operating License and Opportunity for a Hearing

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of an amendment to Facility Operating License Nos. DPR-19 and DPR-25, issued to Exelon Generation Company, LLC, (EGC, or the licensee), for the operation of Dresden Nuclear Power Station, Units 2 and 3, respectively, located in Grundy County, Illinois, and Facility Operating License Nos. DPR-29 and DPR-30, issued to EGC, for operation of the Quad Cities Nuclear Power Station, Units 1 and 2, respectively, located in Rock Island County, Illinois.

The proposed amendment, requested by letter dated February 22, 2001, as supplemented by letter dated May 4, 2001, would revise the technical specifications to reduce the reactor vessel water level—low scram and isolation setpoints by eight inches.

Before issuance of the proposed license amendment, the Commission will have made findings required by the Atomic Energy Act of 1954, as amended (the Act) and the Commission's regulations.

The Commission has made a proposed determination that the amendment request involves no significant hazards consideration. Under the Commission's regulations in 10 CFR 50.92, this means that operation of the facility in accordance with the proposed amendment would not (1) involve a significant increase in the probability or consequences of an accident previously evaluated; or (2) create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) involve a significant reduction in a margin of safety. As required by 10 CFR 50.91(a), the licensee has provided its analysis of the issue of no significant hazards consideration, which is presented below:

Does the Proposed Change Involve a Significant Increase in the Probability or Consequences of an Accident Previously Evaluated?

The vessel water level—low scram and isolation functions are not involved in the initiation of accidents or transients. Therefore, reducing the allowable value for these functions does not affect the probability of an accident previously evaluated.
