National Toxicology Program; Workshop

SUMMARY: National Toxicology Program (NTP); National Institute of **Environmental Health Sciences** (NIEHS); Announces a Workshop on the "Assessment of the Allergenic Potential of Genetically Modified Foods,' September 24–26, 2001, Durham Marriott at the Civic Center, 201 Foster Street, Durham, NC.

Background

There is growing concern among the general public and the scientific community regarding the potential toxicity of genetically modified (GM) foods. Of specific interest is the ability of GM proteins to elicit potentially harmful immunologic responses including hypersensitivity and/or autoimmunity. The lack of information

on the potential toxicity of these products has created a considerable backlash against the producers and users of these crops. This workshop will gather experts in food allergy, GM crops, and the regulatory aspects of these products, along with bench scientists and clinicians, to examine the current state of knowledge in the area, identify the critical issues regarding these materials, and develop testing strategies to examine the allergenicity of these compounds.

Sponsors for the workshop include the Office of Research and Development, U.S. Environmental Protection Agency; National Toxicology Program, Department of Health and Human Services; National Institute of Environmental Health Sciences, National Institutes of Health; Office of Rare Diseases, National Institutes of Health; Center for Food Safety and Nutrition, U.S. Food and Drug Administration. The workshop is organized by the National Institute of Environmental Health Sciences and the National Toxicology Program, Research Triangle Park, North Carolina.
