II. Background

A. Purpose of the Meeting

This 3-day meeting concerns several scientific issues undergoing consideration within the EPA Office of Prevention, Pesticides and Toxic Substances (OPPTS), as follows.

As part of the reregistration process for the Heavy Duty Wood Preservatives (HDWPs), the Agency is evaluating the human and environmental risks of CCA-pesticide products. Chromated copper arsenate treated wood dominates the residential consumer market for use in landscape timbers, decks, fences, and fabricated outdoor structures (e.g., gazebos, picnic tables, and playground equipment). Because of specific concerns associated with use of CCA-treated wood in playground structures, the Agency is presently evaluating available exposure and hazards data in order to assess the risks to children from contact with CCA-treated wood and CCA-contaminated soil on playgrounds.

The FIFRA SAP will be evaluating the scientific soundness and OPP's evaluation of the exposure and hazard data available to the Agency for CCA. Specifically, the SAP will be asked to: (1) Review the exposure scenarios and hazard endpoints that the Agency intends to use in its CCA-risk characterization for children; and (2) provide recommendations concerning additional data needed to reduce the uncertainties of this risk characterization.

B. SAP Report

Copies of the SAP's report of their recommendations will be available approximately 45 working days after the meeting, and will be posted on the FIFRA/SAP Internet Home Page at <http://www.epa.gov/scipoly/sap/> or may be obtained by contacting the Public Information Records Integrity Branch (PIRIB) at the address and telephone number listed under Unit I.B.

II. Receipt of Requests to Cancel Registrations

A. Background

Oxythioquinox (trade name Morestan) is an insecticide/miticide/fungicide first registered in 1968, to control mites, mite eggs on ornamental plants in green houses, nurseries and landscapes. On October 17, 1996, Bayer requested voluntary cancellation of all food uses but citrus. Bayer also requested cancellation of all but two of the 24(c) registrations (California and Louisiana). Subsequently, on June 4, 1997, the Agency received a request from Bayer to cancel registration of the remaining food-use products: Morestan 25WP (3125-117) and Morestan Solupak 25 WP 9 (3125-302). These cancellations were announced in the **Federal Register** of August 27, 1997 (62 FR 45416) (FRL-5737-4), and became final March 9, 1998. Initiation of the exiting stocks period began when the Agency received the request for cancellations and ran for 18 months. On February 1, 1999, Bayer requested cancellation of its remaining oxythioquinox registrations. In a **Federal Register** notice dated March 17, 1999 (64 FR 13191) (FRL-6067-8), EPA announced its receipt of Bayer's February 1, 1999 cancellation request. The Agency did not receive any substantive comments opposing the requested cancellation and is therefore issuing a cancellation order in today's notice granting the cancellation request. After canceling these product registrations, there will be no remaining registered products containing oxythioquinox.

In its February 1, 1999 cancellation request, Bayer conditioned its request on EPA's permitting sale and distribution of the existing stocks for 18 months, and use for 2 years, after the cancellation becomes effective. In other words, Bayer intended to stop sale and distribution sometime in 2001 and asked that EPA provide adequate time for the end users to exhaust their supplies. However, the cancellation did not take place in 1999, as both EPA and Bayer contemplated. In response to EPA's plan to issue a cancellation order now, Bayer indicated that an existing stocks provision permitting sale and distribution for 18 months is unnecessary, because Bayer has already stopped sale and distribution of these products. However, both EPA and Bayer believe that allowing use until
