BILLING CODE 7555-01-M

NUCLEAR REGULATORY COMMISSION

[Docket 72-30]

Maine Yankee Atomic Power Company; Independent Spent Fuel Storage Installation, Issuance of Environmental Assessment and Finding of No Significant Impact for the Proposed Exemption From Certain Requirements of 10 CFR Part 72

The U.S. Nuclear Regulatory Commission (NRC or Commission) is considering issuance of an exemption to Maine Yankee Atomic Power Company (MYAPC or licensee), pursuant to 10 CFR 72.7, from specific provisions of 10 CFR 72.212(a)(2), 72.212(b)(2)(i), 72.212(b)(7), and 72.214. The licensee is planning to use the NAC-UMS Storage System to store spent nuclear fuel from the decommissioning reactor. The requested exemption would allow MYAPC to deviate from requirements of the NAC-UMS Certificate of Compliance No. 1015 (CoC or Certificate), Appendix A, Limiting Condition for Operation (LCO) Items 3.2.1.a and 3.2.1.b, "CANISTER Surface Contamination." Specifically, the requested exemption would allow an increase in removable contamination limits on the accessible NAC-UMS exterior canister surfaces and interior transfer cask surfaces from 1000 dpm/

100 cm² for beta-gamma sources and 20 dpm/100 cm² for alpha sources, which is required by the Certificate, to 10,000 dpm/100 cm² for beta-gamma sources and 100 dpm/100 cm² for alpha sources. The potential increase in radiation dose to members of the public from this exemption request was determined to be up to 1.42 mrem/year at 100 meters. Even with this potential increase in dose, the overall potential dose to members of the public would remain within the requirements of 10 CFR 72.104, 10 CFR 72.106 and 10 CFR 20.1301.

Environmental Assessment (EA)

Identification of Proposed Action: By letter dated October 30, 2001, as supplemented on November 29, 2001, and February 7, 2002, MYAPC requested an exemption from the requirements of 10 CFR 72.212(a)(2), 72.212(b)(2)(i), 72.212(b)(7), and 72.214 to deviate from the requirements in CoC No. 1015, Appendix A, LCO Items 3.2.1.a and 3.2.1.b. MYAPC has informed the NRC of its plans to store spent nuclear fuel under the general licensing provisions of 10 CFR Part 72. The licensee indicated that it plans to use the NAC-UMS Storage System to store spent fuel from the Maine Yankee Atomic Power Station at an Independent Spent Fuel Storage Installation (ISFSI) located in Wiscasset, Maine.

By exempting MYAPC from 10 CFR 72.212(a)(2), 72.212(b)(2)(i), 72.212(b)(7), and 72.214, MYAPC will be authorized to increase the removable contamination limits on the accessible exterior canister surfaces and interior transfer cask surfaces. The contamination limits required by CoC No. 1015 are 1000 dpm/100 cm² for beta-gamma source and 20 dpm/100 cm² for alpha sources. Instead, MYAPC requested to limit removable contamination on the accessible exterior canister surface and interior transfer cask surface to 10,000 dpm/100 cm² for beta-gamma sources and 100 dpm/100 cm² for alpha sources.

The proposed action before the Commission is whether to grant this exemption under 10 CFR 72.7. The NRC staff has reviewed the exemption request and determined that the revised LCO contamination limits are consistent with the safety analyses previously reviewed for the NAC-UMS system, and would have no impact on the design basis and would not be inimical to public health and safety.

Need for the Proposed Action: The MYAPC fuel loading campaign is scheduled to begin in July 2002. An avoidance of potential excessive
