

The Forest Service will collect information from primary wood-using mills, which includes small, part-time mills, as well as large corporate entities. Primary wood-using mills are facilities that use harvested wood in log or chip form, such as sawlogs, veneer logs, pulpwood, and pulp chips, to manufacture a secondary product, such as lumber or paper. The data collected is used to provide essential information about the current drain on the Nation's timber resources for pulpwood industrial products.

Forest Service personnel evaluate the information collected from the pulp mills to monitor the volume, types, species, sources, and prices of timber products harvested throughout the Nation. The data from this collection of information is not available from other sources.

Type of Respondents: Primary users of industrial roundwood products.

Estimated Annual Number of Respondents: 1885.

Estimated Annual Number of Responses per Respondent: 1.

Estimated Total Annual Burden on Respondents: 1583.
