In accordance with PRA-95 (44 U.S.C. 3501-3520), OMB renewed its approval

for these information collection requirements and assigned OMB control numbers to these requirements. Facility Operating License No. DPR-35 for the Pilgrim Nuclear Power Station, located in Plymouth County, Massachusetts. The licensee's application was supplemented by letters dated February 24 and April 17, 2003.

The Commission had previously issued a Notice of Consideration of Issuance of Amendment published in the **Federal Register** on March 18, 2003 (68 FR 12952). However, by letter dated April 17, 2003, the licensee withdrew a portion of the original amendment request pertaining to the proposed change to note (1) of Technical Specification (TS) Table 3.2.B.

The Commission issued License Amendment No. 200 on April 22, 2003, which revised the TSs pertaining to requirements for the emergency core cooling system during shutdown conditions. The change modified the core spray and low pressure injection system's TS requirements to be applicable during the Run, Startup, and Hot Shutdown Modes. The change also modified the high drywell pressure instrumentation TSs to require the instrumentation to be Operable during the Run, Startup and Hot Shutdown Modes. Unnecessary TS requirements were removed based on the plant's operating Mode. Other changes were administrative in nature.

For further details with respect to this action, see the application for amendment dated January 23, 2003, as supplemented February 24, 2003; and the licensee's April 17, 2003, letter that withdrew a portion of the application for license amendment.
