The petitioner requests a modification of the standard to permit the use of low voltage or battery powered non-permissible electronic testing and diagnostic equipment within 150 feet of pillar workings under controlled conditions. The petitioner requests a modification of the existing standard to permit the

following non-permissible equipment to be used within 150 feet from pillar workings (longwall gob): laptop computers, oscilloscopes, vibration analysis machines, cable fault detectors, point temperature probes, infrared temperature devices, insulation testers (meggers), voltage, current and power measurement devices and recorders, pressure and flow measurement devices, signal analyzer device, ultrasonic thickness gauges, electronic component testers, and electronic tachometers, other testing and diagnostic equipment that may be approved by the MSHA District Office. The petitioner states that non-permissible electronic testing and diagnostic equipment shall only be used when equivalent permissible equipment does not exist. The petitioner further states that a qualified person shall continuously monitor for methane immediately before and during the use of non-permissible electronic test and diagnostic equipment in or in by the last open crosscut as defined in existing standard 30 CFR 75.151.
