

Each year, the BLM responds to wildland fires that burn thousands of acres of land for which BLM has fire protection responsibility. The BLM has wildland fire protection responsibility on more than 12 million acres of public land in Arizona. By agreement, the BLM also protects approximately 9 million acres of other federal and state agency lands in Arizona.

Recent fire history statistics demonstrate the connection between past fire management practices and threats to human life and safety, risk of severe wildland fire, and disruption of critical ecological processes. The deaths of 34 firefighters during the 1994 fire season emphasized the danger that fuels accumulation poses to firefighters, and led to the 1995 Federal Wildland Fire Management Policy and Program. The effect of severe wildland fire on resource values is an additional concern to resource-management agencies. In 2002, wildland fires raged across Arizona, with over 600,000 of acres impacted, the largest number of acres to be impacted by wildland fire in the states history. Nationally, more acres burned in 2002 than in any other year in the last half-century.

BLM personnel, other agencies, individuals and user groups have identified preliminary issues and management concerns. Additional issues and modifications to known issues will be identified during public scoping. The major issues identified so far include management of public land resources including natural resource management; cultural resource management and protection; recreation/visitor use and safety; management of grazing, and other uses; as well as integration of public land management with the local community, tribal groups, and other agency needs and plans.

After gathering public comments on what issues the plan should address, BLM will place the suggested issues in one of three categories and provide an explanation for each issue placed into category two or three:

1. Issues to be resolved in the plan;
2. Issues resolved through policy or administrative action; or
3. Issues beyond the scope of this plan.

The public is encouraged to help identify planning issues and concerns during the scoping phase.

An interdisciplinary approach will be used to develop the plan in order to consider the variety of resource issues and concerns identified. Disciplines involved in the planning process will include but not limited to rangeland management, outdoor recreation, fire, archaeology, wildlife, wilderness,

hydrology, soils, sociology, and economics.

*Acting Deputy State Director Resources,
Arizona BLM State Office.*
