

As part of this request, the applicant asserts that Furadan has been an important and necessary tool for control of late season aphid problems the past several seasons. Cotton growers in California are specifically concerned with the prevention of sticky cotton, which can result from sugar secretions from specific insect pests and diminishes the quality of the cotton. The applicant claims that recently registered chloronicotinyl insecticides, which rely on foliar uptake and translaminar movement, are less effective in the late season after foliage has hardened off. The applicant further claims that resistance to these chloronicotinyl insecticides could develop and that without a specific exemption from registration under FIFRA for the use of flowable carbofuran on cotton to control cotton aphids, cotton growers in these states will suffer significant economic losses.

The applicant proposes to make no more than two applications of flowable carbofuran on cotton at the rate of 0.25 lb. active ingredient (8 fluid ounces) in a minimum of 2 gallons of finished spray per acre by air, or 10 gallons of finished spray per acre by ground application. The total maximum proposed use during the 2003 growing season, from August 20, 2003 to October 30, 2003, would be 0.5 lb. active ingredient (16 fluid ounces) per acre. The applicant proposes that a maximum of 300,000 acres could be treated under the requested exemptions. If all of these acres were treated at the maximum proposed rate and for the maximum allowed number of times, 150,000 lbs. active ingredient would be used in California. Under the crisis exemption, a single aerial application of flowable carbofuran at a rate of 0.25 lb. active ingredient (8 fluid ounces) per acre may be made to cotton. A maximum of 200,000 acres of cotton in California may be treated.

This notice does not constitute a decision by EPA on the application itself. The regulations governing section 18 of FIFRA require publication of a notice of receipt of an application for a specific exemption proposing use of a chemical (*i.e.*, an active ingredient) which has been the subject of a Special Review within EPA's Office of Pesticide Programs and is intended for a use that could pose a risk similar to the risk posed by uses evaluated under the Special Review. The granular formulation of carbofuran was the subject of a Special Review between the years of 1986–1991, which resulted in a negotiated settlement whereby most of the registered uses of granular carbofuran were phased out. While the

flowable formulation of carbofuran is not the subject of a Special Review, EPA believes that the proposed use of flowable carbofuran on cotton could pose a risk similar to the risk assessed by EPA under the Special Review of granular carbofuran. The notice provides an opportunity for public comment on the application.

The Agency, will review and consider all comments received during the comment period in determining whether to issue the specific exemption requested by the California Department of Pesticide Regulation.
