Title: Longitudinal Study of Young Children's Exposures in their Homes to Selected Pesticides, Phthalates, Brominated Flame Retardants, and Perfluorinated Chemicals (A Children's Environmental Exposure Research Study—CHEERS)

Abstract: The U.S. EPA's Office of Research and Development's National Exposure Research Laboratory proposes to conduct a two-year longitudinal field measurement study of young children's (aged 0 to 3 years) potential exposures to current-use pesticides and selected phthalates, polybrominated diphenyl ethers, and perfluorinated compounds that may be found in residential environments. The study will be conducted in Duval County, Jacksonville, Florida over a two-year period from 2004 to 2006. Sixty young children will be recruited into this study in two cohorts: (1) infants recruited into the study soon after birth, and, (2) children recruited into the study at approximately 12 months of age. The study involves up to six monitoring events to each home during the two-year study period during which environmental, personal, biological, and activity pattern data will be collected. Each monitoring event consists of four visits to each participant's home. Aggregate exposure estimates will be conducted for the current-use pesticides and selected phthalates in the study. The data collected on the polybrominated diphenyl ethers and the perfluorinated compounds will provide valuable information on concentrations of these compounds in residential environments, the potential magnitude for exposure, and the temporal and spatial variability of these chemicals in residences.

The data collected in this study is very important to the EPA's Program Offices. The reasons for collecting this data are to better identify the exposure factors, routes, and pathways of exposure for these chemicals, thus

improving the Agency's ability to regulate these chemicals, conduct meaningful risk assessments, and develop future studies. Responses to the survey are completely voluntary.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations in 40 CFR are listed in 40 CFR part 9 and are identified on the form and/or instrument, if applicable.

Burden Statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to average approximately 6.5 hours per respondent. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

Respondents/Affected Entities: Residents of Duval County, Jacksonville, Florida.

Estimated Number of Respondents: 60.

Frequency of Response: Quarterly.

Estimated Total Annual Hour Burden: 390.

Estimated Total Annual Respondent Cost: \$3,913.

Dated: February 24, 2004.

Director, Collection Strategies Division.
