

to enable ATSDR to provide ongoing continuing improvement of the site to meet the needs of the MCN clinician. This will also provide ATSDR and MCN

with benchmarks to meet agency performance standards. The feedback survey will be at no financial cost to the participant and will be located on the

ATSDR GIS map server Web site. The estimated annualized burden is 41 hours.

Respondents	Number of respondents	Responses per respondent	Average burden per response (in hours)
MCN Health Care Members	400	1	5/60
General Public	100	1	5/60

Dated: April 16, 2004.

Bill J. Atkinson,

Acting Director, Management Analysis and Services Office, Centers for Disease Control and Prevention.

Proposed Data Collections Submitted for Public Comment and Recommendations

The Centers for Disease Control and Prevention (CDC) publishes a list of information collection requests under review by the Office of Management and Budget (OMB) in compliance with the Paperwork Reduction Act (44 U.S.C. Chapter 35). To request a copy of these requests, call the CDC Reports Clearance Officer at (404) 498-1210. Send written comments to CDC, Desk Officer, Human Resources and Housing Branch, New Executive Office Building, Room 10235,

Washington, DC 20503 or by fax to (202) 395-6974. Written comments should be received within 30 days of this notice.

*Proposed Project: National Hospital Ambulatory Medical Care Survey (NHAMCS) 2005-2006 (OMB No. 0920-0278)—Revision—*National Center for Health Statistics (NCHS), Centers for Disease Control and Prevention (CDC).

The National Hospital Ambulatory Medical Care Survey (NHAMCS) is managed by CDC, NCHS, Division of Health Care Statistics. This survey has been conducted annually since 1992. The purpose of NHAMCS is to meet the needs and demands for statistical information about the provision of ambulatory medical care services in the United States. Ambulatory services are rendered in a wide variety of settings, including physicians' offices and hospital outpatient and emergency departments. The targeted population for NHAMCS will consist of in-person visits made to outpatient departments and emergency departments that are non-Federal, short-stay hospitals (hospitals with an average length of stay of less than 30 days) or those whose specialty is general (medical or surgical) or children's general. NHAMCS was initiated to complement the National

Ambulatory Medical Care Survey (NAMCS, OMB No. 0920-0234) which provides similar data concerning patient visits to physicians' offices.

NHAMCS provides a range of baseline data on the characteristics of the users and providers of ambulatory medical care. Data collected include patients' demographic characteristics and reason(s) for visit, and the physicians' diagnosis, diagnostic services, medications, and disposition. In addition to the annual statistics normally collected, a key focus of the 2005/06 survey will be on the prevention and treatment of selected chronic conditions. These data, together with trend data, may be used to monitor the effects of change in the health care system, for the planning of health services, improving medical education, and assessing the health status of the population.

Users of NHAMCS data include, but are not limited to, congressional offices, Federal agencies, state and local governments, schools of public health, researchers, administrators, and health planners. Data collection will continue through 2005 to 2006. The estimated annualized burden is 8,960 hours.

Respondents	Form name	Number of respondents	Number of responses per respondent	Average burden per respondent
Hospital Chief Medical Officer	Hospital Induction (NHAMCS-101)			
	Ineligible	50	1	15/60
	Eligible	440	1	1
Ancillary Service Executive	Ambulatory Unit Induction (ED) (NHAMCS-101/U).	380	1	1
Ancillary Service Executive	Ambulatory Unit Induction (OPD) (NHAMCS-101/U).	240	4	4
Registered Nurse/Medical Record Clerk	ED Patient Record Form	830	100	5/60
Registered Nurse/Medical Record Clerk	OPD Patient Record Form	240		

Dated: April 16, 2004.

Proposed Project: Cross-sectional Outcome Survey for Evaluation of the CDC Youth Media Campaign—New—National Center for Chronic Disease Prevention and Health Promotion

(NCCDPHP), Centers for Disease Control and Prevention (CDC).

In FY 2001, Congress established the Youth Media Campaign at the Centers for Disease Control and Prevention (CDC). Specifically, the House Appropriations Language said: "The Committee believes that, if we are to have a positive impact on the future health of the American population, we must change the behaviors of our children and young adults by reaching them with important health messages". CDC, working in collaboration with federal partners, coordinated an effort to plan, implement, and evaluate a campaign designed to clearly communicate messages that will help youth develop habits that foster good health over a lifetime. The campaign is based on principles that have been shown to enhance success, including: Designing messages based on research; testing messages with the intended audiences; involving young people in all aspects of campaign planning and implementation; enlisting the involvement and support of parents and other influencers; refining the messages based on research; and measuring the effect of the campaign on the target audiences.

To measure the effect of the campaign on the target audiences, CDC is using a longitudinal design with a telephone survey of tween and parent dyads (Children's Youth Media Survey and Parents' Youth Media Survey, OMB No. 0920-0587) that assesses aspects of the knowledge, attitudes, beliefs, and levels of involvement in positive and physical

activities. The baseline survey was conducted prior to the launch of the campaign from April through 2002. Three thousand parent/child dyads (from a nationally representative sample) and 3000 parent/child dyads from the six "high dose" communities were interviewed, for a total of 12,000 respondents. To measure the first year's effects of the campaign, a follow up survey was administered to the baseline respondents April to June 2003. The same respondents will be re-surveyed in April to June 2004.

In addition to the follow-up survey, a new national cross-sectional sample will be included in the outcome evaluation for spring 2004. The cross-sectional sample will serve as a bridge to future years of the outcome survey design, which transfers from a longitudinal to a cross-sectional design. Use of a concurrent cross-sectional survey will address important design problems related to recontact respondent bias that can affect the results of a longitudinal survey. Thus, a telephone survey will be administered in spring 2004 to 2,400 parent/youth dyads in the new national cross-sectional sample using RDD (random digital dialing) methodology. This survey will occur concurrently with the Year-2 Follow-up Survey, and the survey instrument will be the same as the Year-2 Follow-up Survey. In years subsequent to 2004, YMC will continue to conduct cross-sectional surveys of approximately 2400 parent/child dyads. The estimated annualized burden is 1,548 hours.

Respondents	Number of respondents	Number of responses per respondent	Average burden per response
Screener 2004	21,052	1	1/60
YMC Cross-sectional Child 2004	2,400	1	15/60
YMC Cross-sectional Parent 2004	2,388	1	15/60

Dated: April 16, 2004.
