

determine if they meet high priority or common measurement needs and to identify whether additional measure development is required. Until the trademarked version is available, access to and use of draft versions will be limited and subject to certain conditions, *e.g.*, obtaining explicit written permission from AHRQ and in return, agreeing to provide assessments of testing experience with the measures.

- **Implementation Plan:** A description of the final survey process as well as recommendations to implement the final standardized CAHPS® family assessment of nursing home care instrument will be made readily available *e.g.*, on AHRQ and CMS Web sites and will include information related to data collection, analysis, and public reporting.

Dated: April 26, 2004.

Carolyn M. Clancy,
Director.

Proposed Data Collections Submitted for Public Comment and Recommendations

The Centers for Disease Control and Prevention (CDC) publishes a list of information collection requests under review by the Office of Management and Budget (OMB) in compliance with the

Paperwork Reduction Act (44 U.S.C. Chapter 35). To request a copy of these requests, call the CDC Reports Clearance Officer at (404) 498-1210. Send written comments to CDC, Desk Officer, Human Resources and Housing Branch, New Executive Office Building, Room 10235, Washington, DC 20503 or by fax to (202) 395-6974. Written comments should be received within 30 days of this notice.

Proposed Project

A Community-based Intervention Model to Promote Neighborhood Participation in the Reduction of *Aedes aegypti* Indices in Puerto Rico—Reinstatement with change—National Center for Infectious Diseases (NCID), Centers for Disease Control and Prevention (CDC). The *Aedes aegypti* mosquito transmits dengue, a mosquito-borne viral disease of the tropics. The symptoms of dengue disease include fever, headache, rash, retro-orbital pain, myalgias, arthralgias, nausea or vomiting, abdominal pain, and hemorrhagic manifestations.

Since there is no vaccine available to prevent dengue, prevention efforts are directed to control the vector mosquito. The limited efficacy of insecticides in preventing disease transmission has prompted the search for new approaches involving community participation.

Research in Puerto Rico, where dengue is endemic and intermittently epidemic, has shown that levels of awareness about dengue are very high in the population and that the next step should be the translation of this knowledge into practice (behavior change). To achieve this goal, a model of community participation to prevent

and control dengue should be developed. This model of community participation must be an effectively implemented prevention project.

The objective of the dengue prevention project is to develop and evaluate a community-based participation intervention model that will reduce *Aedes aegypti* infestation in a community in Puerto Rico. To accomplish this, two comparable communities in the San Juan, Puerto Rico area will be selected for this study. One community will be a “control community” and the second community will be an “intervened community.” Entomologic surveys and person-to-person interviews to assess knowledge, attitudes, and practices (KAP) will be conducted during the project in both communities. The entomologic surveys and person-to-person interviews will be conducted three times during the project: the beginning of the project, the end of the first year of the project, and 18 months after the beginning of the project.

An additional interview will also be conducted in the intervened community to assess the function and significance of artificial containers that hold water. An ethnographic assessment will be performed to determine the resources and needs of the intervened community. The specific dengue prevention activities that the intervened community will perform will be based on results of the initial entomologic survey, KAP, function and significance of artificial containers, and the ethnographic assessment of the community. The total estimated annualized burden is 755 hours.

Forms	Number of respondents	Number of responses/respondent	Average burden/response (in hrs)
KAP Depression scale/Larval survey	400	2	45/60
Informal Interview	3	1	30/60
In-depth Interview	7	1	30/60
Focus Groups	10	2	1.5
Larval Survey (sub-sample)	80	3	30/60

Dated: April 28, 2004.

Alvin Hall,

Director, Management Analysis and Services Office, Centers for Disease Control and Prevention.

Proposed Data Collections Submitted for Public Comment and Recommendations

The Centers for Disease Control and Prevention (CDC) publishes a list of

information collection requests under review by the Office of Management and Budget (OMB) in compliance with the Paperwork Reduction Act (44 U.S.C. Chapter 35). To request a copy of these requests, call the CDC Reports Clearance Officer at (404) 498-1210. Send written comments to CDC, Desk Officer, Human Resources and Housing Branch, New Executive Office Building, Room 10235, Washington, DC 20503 or by fax to (202) 395-6974. Written comments should be received within 30 days of this notice.

Proposed Project: List of Ingredients Added to Tobacco in the Manufacture of Cigarette Products, OMB No. 0920-0210 "Reinstatement—National Center for Chronic Disease Prevention and Health Promotion (NCCDPHP), Centers for Disease Control and Prevention (CDC).

The Comprehensive Smoking Education Act of 1984 (15 U.S.C. 1336 or Pub. L. 98-474) requires each person who manufactures, packages, or imports

cigarettes to provide the Secretary of Health and Human Services (HHS) with a list of ingredients added to tobacco in the manufacture of cigarettes. This legislation also authorizes HHS to undertake research, and submit an annual report to Congress (as deemed appropriate) discussing the health effects of cigarette ingredients. HHS has delegated responsibility for the implementation of this Act to CDC's

Office on Smoking and Health (OSH). OSH has collected ingredient reports on cigarette products since 1986. Cigarette smoking is the leading preventable cause of premature death and disability in our Nation. Each year more than 400,000 premature deaths occur as the result of cigarette smoking related diseases. The estimated annualized burden is 1,406 hours.

Respondents	Number of respondents	Number of responses per respondent	Average burden per response (in hrs.)
Cigarette Manufacturers	38	1	37

Dated: April 28, 2004.

Alvin Hall,

Director, Management Analysis and Services Office, Centers for Disease Control and Prevention.

Proposed Project: List of Ingredients Added to Tobacco in the Manufacture of Smokeless Tobacco Products, OMB No. 0920-0338—Reinstatement—National Center for Chronic Disease Prevention and Health Promotion (NCCDPHP), Centers for Disease Control and Prevention (CDC).

The Comprehensive Smokeless Tobacco Health Education Act of 1986 (15 U.S.C. 4401 *et seq.*, Pub. L. 99-252) requires each person who manufactures,

packages, or imports smokeless tobacco (SLT) products to provide the Secretary of Health and Human Services (HHS) with a list of ingredients added to tobacco in the manufacture of smokeless tobacco products. This legislation also authorizes HHS to undertake research, and submit an annual report to the Congress (as deemed appropriate), discussing the health effects of ingredients in smokeless tobacco products. HHS delegated responsibilities for the implementation of this Act to CDC's Office on Smoking and Health (OSH). The oral use of SLT represents a significant health risk which can cause cancer and a number of non-cancerous oral conditions, and can lead to nicotine addiction and dependence. Furthermore, SLT use is not a safe substitute for cigarette smoking. The estimated annualized burden is 254 hours.

Respondents	Number of respondents	Number of responses per respondent	Average burden per response (in hrs.)
Smokeless Tobacco Manufacturers	6	1	42

Dated: April 28, 2004.
