Loran-C Transmitting Station Port Clarence Proposed Relocation

AGENCY: Coast Guard, DHS.

ACTION: Notice; request for comments.

SUMMARY: The United States Coast Guard is considering relocating its Loran-C operations from Port Clarence, Alaska (7960-Z/9990-Y) to Nome, Alaska. This proposal could alter the operations and coverage provided by the North Pacific (9990) and Gulf of Alaska (7960) Loran-C chains. The Coast Guard requests input on any concerns that the

public may have related to the possible impact on Loran-C usage.

SUPPLEMENTARY INFORMATION:

Background

The Coast Guard Loran-C system is a low frequency hyperbolic radionavigation system. A Loran-C receiver measures the slight difference in time it takes for pulsed signals to reach a ship or aircraft from the

transmitting stations within a Loran-C chain to develop a navigational position. Port Clarence is a USCG Loran-C Station, whose sole purpose is to maintain and operate the Loran-C equipment providing electronic navigation signals supporting maritime and aviation uses in Alaska. Port Clarence was constructed in the early 1960's as one of the first generation of Loran-C stations. The station is located on 2,646 acres of land on Point Spencer, a 12-mile long gravel spit extending into the Bering Sea at the west end of Alaska's Seaward Peninsula. Loran-C station Port Clarence's remote location requires the Coast Guard to generate their own electrical power, maintain large fuel tanks, maintain aging buildings and equipment, and fly in provisions for station equipment and personnel. In an effort to reduce operating costs, the Coast Guard is considering relocating the Loran-C Station to Nome, Alaska where commercial power and daily commercial flights are available. If the Loran-C station is built in Nome it will be equipped with the latest Loran-C technology and optimized for minimal staffing.

Impact to 9990 and 7960 Loran-C Coverage

Disestablishing Loran-C Station Port Clarence and establishing a new Loran-C Station in the Nome, Alaska area will likely affect the public's usage of Loran-C. While the coverage area provided by the 9990 and 7960 Loran-C chains will vary only slightly, users will no longer be able to use the 9990-Y or 7960-Z baselines without having their receivers reprogrammed to reflect the changes in latitude and longitude. It is possible that receivers that are not reprogrammed could provide hazardously misleading information to the user. In addition, timing users will need to determine a new reference value due to the new geographic location of the station.

Diagrams of the proposed change in coverage can be viewed at <http://www.navcen.uscg.gov> as well as in the docket for this notice at <http://dms.dot.gov>.

Next Steps for This Project

At this time, the Coast Guard is seeking comments only with respect to the impact on Loran-C changes. After this has been considered, should the Coast Guard choose to continue with this proposed action, we would prepare

an Environmental Assessment. If an Environmental Assessment is prepared, we will publish notice of its availability in the **Federal Register**.
