

real property, including above, surface, and below ground and water, and the foundation to support the description of that geographic extent.

8. *Cadastral (Marine)*: The marine cadastre includes, but is not limited to: Marine Managed Areas and their boundaries; parcels of ocean uses and their boundaries, including the submerged land management system used by the United States; and the rights, restrictions, responsibilities, and legal authority applied to marine spaces.

9. *Governmental Unit Boundaries*: Governmental units are legally bounded geographic entities that have the authority of a government. A legal government is one established under Federal, Tribal, State or local law with the authority to elect or appoint officials and raise revenues through taxes.

The Governmental Unit Boundary standard accommodates other legal entities and adopts the ANSI X3.31 (FIPS Publication 55-3) description for such entities and also applies to entities that are statistically equivalent to a legal entity for data reporting purposes, e.g., incorporated places that are independent of counties and serve as equivalent to a county.

The framework data standards were initially developed through the Geospatial One-Stop e-government initiative (*see* <http://www.geo-one-stop.gov>); however, the Federal Geographic Data Committee (FGDC) organization will complete this intergovernmental geospatial standards development on behalf of Geospatial One-Stop and subsequently maintain the standards.

Framework data standards will be submitted for approval by the American National Standards Institute (ANSI). ANSI is a private, non-profit organization (501(c)3) that administers and coordinates the U.S. voluntary standardization and conformity assessment system. ANSI has accredited the InterNational Committee for Information Technology Standards (INCITS) to develop standards for information and Communications Technologies (ICT). The INCITS Secretariat is administered by the Information Technology Industry (ITI) Council, a trade association representing leading U.S. providers of information technology products and services. The project for development of framework data standards is registered as INCITS 1574-D, Geographic Information Framework Data Content Standard.

As the framework data standards were developed using public funds, Geospatial One-Stop and the FGDC shall be able to freely publish and distribute the contents, including the framework

models to the public, as provided through the Freedom of Information Act (FOIA). Upon adoption of the framework data standards as American National Standards, the Information Technology Information (ITI) Council will copyright the American National Standards version of these standards on behalf of INCITS and provide free of charge to the FGDC a non-exclusive license to these standards.
