If you do not have access to the Internet, you may request a copy of the policy by contacting the individual listed in this section.

SUPPLEMENTARY INFORMATION: The FAA published a notice in the Federal **Register** on June 16, 2003 (68 FR 35770) to announce the availability of the proposed policy and invite interested parties to comment.

Background

The FAA, in cooperation with industry, has developed a multi-faceted strategy to improve the safety of highenergy rotors. This strategy includes improving the ultrasonic (UT) billet inspection of titanium (Ti) alloys used in fan disks and other critical rotating engine hardware. This policy establishes minimum safety standards for the UT billet inspection of Ti material used in the manufacturing of engine rotating components. This policy does not create any new requirements.

- For each issue, state what specific change you are requesting to the proposed policy.
- Include justification, reasons, or data for each change you are requesting.

We also welcome comments in support of the proposed policy.

We will consider all communications received on or before the closing date for comments. We may change the proposed policy because of the comments received.

Background

Due to concern about trapped waste material being a potential fire hazard, the FAA has required seat armrest cavities to be either completely enclosed or have an open bottom. The FAA has conducted research and has determined that for typical armrest cavities, these conditions do not need to be met to prevent a fire hazard. Therefore, revised policy is being proposed.
