

and submit to the Administrator of EPA, an annual report of violations of national primary drinking water regulations in the state. The states' reports are to include violations of maximum contaminant levels, treatment requirements, variances and exemptions, and monitoring requirements determined to be significant by the Administrator after consultation with the states. Section 1414(c)(3)(B) of the Safe Drinking Water Act requires EPA to prepare and make available to the public an annual report that summarizes and evaluates the reports submitted by the states pursuant to section 1414(c)(3)(A). EPA's annual national report must also provide specified information about implementation of the public water system supervision system on Indian reservations and make recommendations concerning the resources necessary to improve compliance with the Safe Drinking Water Act. The States have already prepared and published seven annual reports. EPA has prepared and published six national reports.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations in 40 CFR are listed in 40 CFR part 9 and are identified on the form and/or instrument, if applicable. In an effort to minimize a state's burden in preparing its annual statutorily-required report, EPA issued guidance that explains what Section 1414(c)(3)(A) requires and provides model language and reporting templates. EPA also annually makes available to the states a computer query that generates for each state (from information states are already required to submit to EPA's national database on a quarterly basis) the required violations information in a table consistent with the reporting template in EPA's guidance.

Burden Statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to average 208 hours for annual response. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with

any previously applicable instructions and requirements; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

Respondents/Affected Entities: States, Tribes, and territories that have primary enforcement authority and meet the definition of "state" under the Safe Drinking Water Act.

Estimated Number of Respondents: 56.

Frequency of Response: Annually.

Estimated Total Annual Hour Burden: 4,480.

Estimated Total Annual Cost: \$280,000, includes \$0 annual capital/startup costs, \$0 annual O&M costs and \$280,000 annual labor costs.

Changes in the Estimates: There is an increase of 180 hours in the total estimated burden currently identified in the OMB Inventory of Approved ICR Burdens. This is due to the fact that the Navajo Nations was approved for primacy on December 6, 2000, which increased the number of respondents.

Dated: September 15, 2004.

Title: Transition Program for Equipment Manufacturers (Renewal).

Abstract: In August 1998, EPA established emission standards (Tier I standards) for engines under 37 kW, and tightened existing standards (Tier II standards) for engines above 37 kW. These regulations are likely to cause some engine design changes. During the rulemaking process, some equipment manufacturers expressed concerns about delays in notification from engine manufacturers about engine design changes. These design changes can create problems in fitting the engine to the equipment. Consequently, equipment manufacturers would be unable to sell the volume of equipment they planned for, since they would need to redesign their equipment before any products could be sold. In an effort to provide original equipment manufacturers (OEMs) with some
