Title: Control Technology Determinations for Constructed and Reconstructed Major Sources of Hazardous Air Pollutants (40 CFR part 63, subpart B) (Renewal).

Abstract: Section 112(g)(2)(B) of the Clean Air Act as amended in 1990 requires that maximum achievable control technology (MACT), determined on a case-by-case basis, be met by constructed or reconstructed major sources of hazardous air pollutants. In order to receive a permit to construct or reconstruct a major source, the applicant must conduct the necessary research, perform the appropriate analyses and prepare the permit application with documentation to demonstrate that their project meets all applicable statutory and regulatory requirements. Permitting agencies, either State, local or Federal, review and approve or disapprove the permit application. Specific activities and requirements are listed and described in the Supporting Statement for the ICR.

The information collected in the section 112(g) applications provides (for the purposes of compliance determination) documentation of the selection of a particular control technology for case-by-case MACT. Applications are reviewed by a state or local agency for which authority has been delegated by EPA to make the requisite determinations. In addition, EPA will review some applications as an oversight function.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB Control Numbers for EPA's regulations are listed in 40 CFR part 9 and 48 CFR chapter 15, and are identified on the form and/or instrument, if applicable.

Burden Statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to average 245 hours per response. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and

maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

Respondents/Affected Entities: Entities potentially affected by this action are those who must submit an application for a permit to construct or reconstruct a major source of hazardous air pollution, permitting agencies who review the permit applications, and EPA staff who review some permitting authority decisions.

Estimated Number of Respondents: 150.

Frequency of Response: On occasion.

Estimated Total Annual Hour Burden: 36,800.

Estimated Total Annual Costs: \$2,419,100, which includes \$0 annualized capital/startup costs, \$3,930 annual O&M costs, and \$2,415,170 annual labor costs.

Changes in the Estimates: There is a decrease of 55,410 hours in the total estimated burden currently identified in the OMB Inventory of Approved ICR Burdens. This decrease is due to a reduction in annual burden due to an improved estimate of the number of facilities and a decrease in annual per person training burden.

Dated: October 27, 2004.

Joseph A. Sierra,

Acting Director, Collection Strategies Division.
