

F. Level of Trade

In accordance with section 773(a)(1)(B) of the Act, we determined NV based on sales in the comparison market at the same level of trade ("LOT") as the EP sales, to the extent practicable. When there were no sales at the same LOT, we compared U.S. sales to comparison market sales at a different LOT. When NV is based on CV, the NV LOT is that of the sales from which we derive SG&A expenses and profit.

Pursuant to section 351.412 of the Department's regulations, to determine whether comparison market sales were at a different LOT, we examined stages in the marketing process and selling functions along the chain of distribution between the producer and the unaffiliated (or arm's-length) customers. If the comparison-market sales were at a different LOT and the differences affect price comparability, as manifested in a pattern of consistent price differences between the sales on which NV is based and comparison-market sales at the LOT of the export transaction, we will make an LOT adjustment under section 773(a)(7)(A) of the Act.

For a detailed description of our LOT methodology and a summary of company-specific LOT findings for these preliminary results, see the calculation memoranda, all on file in the CRU.

Currency Conversion

For purposes of these preliminary results, we made currency conversions in accordance with section 773A(a) of the Act, based on the official exchange rates published by the Federal Reserve Bank.

Preliminary Results of Review

As a result of our review, we preliminarily determine that the following percentage weighted-average margins exist for the period April 10, 2002, through September 30, 2003:

Manufacturer/exporter	Margin (percent)
SICARTSA	1.82
Hylsa Puebla	7.27

The Department will disclose calculations performed within five days of the date of publication of this notice to the parties of this proceeding in accordance with 19 CFR 351.224(b). An interested party may request a hearing within 30 days of publication of these preliminary results. See 19 CFR 351.310(c). The Department will announce the due date of the case briefs at a later date. Rebuttal briefs must be

limited to issues raised in the case briefs. Parties who submit arguments are requested to submit with the argument (1) a statement of the issue, and (2) a brief summary of the argument. Further, parties submitting written comments are requested to provide the Department with an additional copy of the public version of any such comments on diskette. An interested party may request a hearing within 30 days of publication of these preliminary results. See 19 CFR 351.310(c). Any hearing, if requested, ordinarily will be held two days after the due date of the rebuttal briefs. The Department will issue the final results of this administrative review, which will include the results of its analysis of issues raised in any such comments, or at a hearing, if requested, within 120 days of publication of these preliminary results.

Assessment Rate

Pursuant to 19 CFR 351.212(b), the Department calculated an assessment rate for each importer of the subject merchandise. Upon issuance of the final results of this administrative review, if any importer-specific assessment rates calculated in the final results are above *de minimis* (i.e., at or above 0.5 percent), the Department will issue appraisal instructions directly to CBP to assess antidumping duties on appropriate entries by applying the assessment rate to the entered value of the merchandise. For assessment purposes, we calculated importer-specific assessment rates for the subject merchandise by aggregating the dumping margins for all U.S. sales to each importer and dividing the amount by the total entered value of the sales to that importer. Where appropriate, to calculate the entered value, we subtracted international movement expenses (e.g., international freight) from the gross sales value.

Cash Deposit Requirements

To calculate the cash deposit rate for each producer and/or exporter included in this administrative review, we divided the total dumping margins for each company by the total net value for that company's sales during the review period.

The following deposit rates will be effective upon publication of the final results of this administrative review for all shipments of wire rod from Mexico entered, or withdrawn from warehouse, for consumption on or after the publication date, as provided by section 751(a)(2)(C) of the Act: (1) The cash deposit rates for the companies listed above will be the rates established in the final results of this review, except if the rate is less than 0.5 percent and,

therefore, *de minimis*, the cash deposit will be zero; (2) for previously reviewed or investigated companies not listed above, the cash deposit rate will continue to be the company-specific rate published for the most recent final results in which that manufacturer or exporter participated; (3) if the exporter is not a firm covered in this review, a prior review, or the original LTFV investigation, but the manufacturer is, the cash deposit rate will be the rate established for the most recent final results for the manufacturer of the merchandise; and (4) if neither the exporter nor the manufacturer is a firm covered in this or any previous review conducted by the Department, the cash deposit rate will be 20.11 percent, the "All Others" rate established in the LTFV investigation. See *Wire Rod From Mexico*, 67 FR 55800, at 55801.

These cash deposit requirements, when imposed, shall remain in effect until publication of the final results of the next administrative review.

Notification to Importers

This notice serves as a preliminary reminder to importers of their responsibility under 19 CFR 351.402(f) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in the Secretary's presumption that reimbursement of antidumping duties occurred and the subsequent assessment of double antidumping duties.

This administrative review is issued and published in accordance with sections 751(a)(1) and 777(i)(1) of the Act.

Dated: November 1, 2004.

James J. Jochum,

Assistant Secretary for Import Administration.

International Trade Administration

[A-274-804]

Preliminary Results of Antidumping Duty Administrative Review of the Antidumping Duty Order: Carbon and Alloy Steel Wire Rod from Trinidad and Tobago

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

ACTION: Notice of the Preliminary Results of Antidumping Duty Administrative Review.

SUMMARY: In response to requests by interested parties, the Department of Commerce ("the Department") is conducting an administrative review of the antidumping duty order on carbon and alloy steel wire rod ("wire rod") from Trinidad and Tobago for the period of review ("POR") April 10, 2002, through September 30, 2003.

We preliminarily determine that during the POR, Carribean Ispat Limited and its affiliates Ispat North America Inc. ("INA") and Walker Wire (Ipsat), Inc. ("Walker Wire") (collectively "CIL"), sold subject merchandise at less than normal value ("NV"). If these preliminary results are adopted in the final results of this administrative review, we will instruct U.S. Customs and Border Protection ("CBP") to assess antidumping duties equal to the difference between the export price ("EP") or constructed export price ("CEP") and NV.

Interested parties are invited to comment on these preliminary results. Parties who submit comments in this segment of the proceeding should also submit with them: (1) a statement of the issues and (2) a brief summary of the comments. Further, parties submitting written comments are requested to provide the Department with an electronic version of the public version of any such comments on diskette.

EFFECTIVE DATE: November 8, 2004.

FOR FURTHER INFORMATION CONTACT: Dennis McClure or James Terpstra, AD/CVD Operations, Office 3, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue, NW, Washington, DC 20230; telephone: (202) 482-5973 or (202) 482-3965, respectively.

SUPPLEMENTARY INFORMATION:

Background

On October 29, 2002, the Department published in the *Federal Register* the antidumping duty order on wire rod from Trinidad and Tobago; see Notice of Antidumping Duty Orders: Carbon and Certain Alloy Steel Wire Rod from Brazil, Indonesia, Mexico, Moldova, Trinidad and Tobago, and Ukraine, 67 FR 65945. On October 1, 2003, we published in the *Federal Register* the notice of *Antidumping or Countervailing Duty Order, Finding, or Suspended Investigation: Opportunity To Request Administrative Review*, 68 FR 56618.

We received timely requests for review from petitioners,¹ and CIL, in accordance with 19 CFR 351.213(b)(2). On November 28, 2003, we published the notice of initiation of this antidumping duty administrative review covering the period April 10, 2002, through September 30, 2003, naming CIL as the respondent. See *Initiation of Antidumping and Countervailing Duty Administrative Reviews*, 68 FR 66799 (November 28, 2003). On December 9, 2003, we sent a questionnaire to CIL.²

During the most recently completed segment of the proceeding in which CIL participated, the Department found and disregarded sales that failed the cost test.³ Pursuant to section 773(b)(2)(A)(ii) of the Tariff Act of 1930, as amended ("the Act"), we had reasonable grounds to believe or suspect that sales by CIL of the foreign like product under consideration for the determination of NV in this review were made at prices below the cost of production ("COP"). Therefore, we initiated a cost investigation of the respondent, and instructed it to fill out section D upon issuance of the initial questionnaire.

CIL submitted its responses to the Department's questionnaire on January 12, 2004, January 30, 2004, and February 13, 2004. On February 23, 2004, and March 19, 2004, the petitioners submitted comments on CIL's questionnaire response.

On June 14, 2004, the Department published an extension of preliminary results of this review, extending its preliminary results until October 30, 2004.⁴ See *Carbon and Certain Alloy Steel Wire Rod From Mexico and Trinidad and Tobago: Extension of Preliminary Results of 2002/2003 Antidumping Duty Administrative Reviews*, 69 FR 32979 (June 14, 2004).

On August 16, 2004, the Department issued a section A-E supplemental questionnaire to CIL. We received the response to the supplemental questionnaire on September 21, 2004. On October 5, 2004, the Department

received petitioners' comments on CIL's response to the Department's August 16, 2004, supplemental questionnaire. On October 15, 2004, we received a response from CIL regarding the petitioners' October 5, 2004, comments.

On October 8, 2004, the Department received a reconciliation of CIL's home market and U.S. sales database to its income statements. On October 15, 2004, the Department sent a supplemental questionnaire to further clarify the sales reconciliation. CIL submitted its response on October 22, 2004.

Scope of the Antidumping Duty Order

Effective July 24, 2003, in accordance with the Department's *Notice of Final Result of Changed Circumstances Review of the Antidumping Duty and Countervailing Duty Orders, and Intent To Revoke Orders in Part*, 68 FR 64079 (November 12, 2003), the scope of this order was amended. Therefore, for purposes of this review, there were separate scopes in effect. These scopes are set forth below.

Scope of Order from October 29, 2002, through July 23, 2003

The merchandise subject to this order is certain hot-rolled products of carbon steel and alloy steel, in coils, of approximately round cross section, 5.00 mm or more, but less than 19.00 mm, in solid cross-sectional diameter.

Specifically excluded are steel products possessing the above-noted physical characteristics and meeting the *Harmonized Tariff Schedule of the United States* (HTSUS) definitions for (a) stainless steel; (b) tool steel; (c) high nickel steel; (d) ball bearing steel; and (e) concrete reinforcing bars and rods. Also excluded are (f) free machining steel products (i.e., products that contain by weight one or more of the following elements: 0.03 percent or more of lead, 0.05 percent or more of bismuth, 0.08 percent or more of sulfur, more than 0.04 percent of phosphorus, more than 0.05 percent of selenium, or more than 0.01 percent of tellurium).

Also excluded from the scope are 1080 grade tire cord quality wire rod and 1080 grade tire bead quality wire rod. This grade 1080 tire cord quality rod is defined as: (i) grade 1080 tire cord quality wire rod measuring 5.0 mm or more but not more than 6.0 mm in cross-sectional diameter; (ii) with an average partial decarburization of no more than 70 microns in depth (maximum individual 200 microns); (iii) having no inclusions greater than 20 microns; (iv) having a carbon segregation per heat average of 3.0 or better using European Method NFA 04-

¹ The petitioners are Co-Steel Raritan, Inc., GS Industries, Inc., Keystone Consolidated Industries, Inc., and North Star Steel Texas, Inc.

Section A: Organization, Accounting Practices, Markets and Merchandise

Section B: Comparison Market Sales

Section C: Sales to the United States

Section D: Cost of Production and Constructed Value

Section E: Cost of Further Manufacture or Assemble Performed in the United States

³ The most recently completed segment in which CIL participated was the investigation. See *Notice of Final Determination of Sales at Less Than Fair Value: Carbon and Certain Alloy Steel Wire Rod From Trinidad and Tobago*, 67 FR 55788 (August 30, 2002) ("Final Determination").

⁴ Since the due date falls on a Saturday, the actual signature date is November 1, 2004.

114; (v) having a surface quality with no surface defects of a length greater than 0.15 mm; (vi) capable of being drawn to a diameter of 0.30 mm or less with 3 or fewer breaks per ton, and (vii) containing by weight the following elements in the proportions shown: (1) 0.78 percent or more of carbon, (2) less than 0.01 percent of aluminum, (3) 0.040 percent or less, in the aggregate, of phosphorus and sulfur, (4) 0.006 percent or less of nitrogen, and (5) not more than 0.15 percent, in the aggregate, of copper, nickel and chromium.

This grade 1080 tire bead quality rod is defined as: (i) grade 1080 tire bead quality wire rod measuring 5.5 mm or more but not more than 7.0 mm in cross-sectional diameter; (ii) with an average partial decarburization of no more than 70 microns in depth (maximum individual 200 microns); (iii) having no inclusions greater than 20 microns; (iv) having a carbon segregation per heat average of 3.0 or better using European Method NFA 04-114; (v) having a surface quality with no surface defects of a length greater than 0.2 mm; (vi) capable of being drawn to a diameter of 0.78 mm or larger with 0.5 or fewer breaks per ton; and (vii) containing by weight the following elements in the proportions shown: (1) 0.78 percent or more of carbon, (2) less than 0.01 percent of soluble aluminum, (3) 0.040 percent or less, in the aggregate, of phosphorus and sulfur, (4) 0.008 percent or less of nitrogen, and (5) either not more than 0.15 percent, in the aggregate, of copper, nickel and chromium (if chromium is not specified), or not more than 0.10 percent in the aggregate of copper and nickel and a chromium content of 0.24 to 0.30 percent (if chromium is specified).

The designation of the products as "tire cord quality" or "tire bead quality" indicates the acceptability of the product for use in the production of tire cord, tire bead, or wire for use in other rubber reinforcement applications such as hose wire. These quality designations are presumed to indicate that these products are being used in tire cord, tire bead, and other rubber reinforcement applications, and such merchandise intended for the tire cord, tire bead, or other rubber reinforcement applications is not included in the scope. However, should petitioners or other interested parties provide a reasonable basis to believe or suspect that there exists a pattern of importation of such products for other than those applications, end-use certification for the importation of such products may be required. Under such circumstances, only the importers of record would normally be required to

certify the end use of the imported merchandise.

All products meeting the physical description of subject merchandise that are not specifically excluded are included in this scope.

The products under review are currently classifiable under subheadings 7213.91.3010, 7213.91.3090, 7213.91.4510, 7213.91.4590, 7213.91.6010, 7213.91.6090, 7213.99.0031, 7213.99.0038, 7213.99.0090, 7227.20.0010, 7227.20.0020, 7227.20.0090, 7227.20.0095, 7227.90.6051, 7227.90.6053, 7227.90.6058, and 7227.90.6059 of the HTSUS. Although the HTSUS subheadings are provided for convenience and customs purposes, the written description of the scope of this proceeding is dispositive.

Scope of Order from July 24, 2003, through the POR

The merchandise subject to this order is certain hot-rolled products of carbon steel and alloy steel, in coils, of approximately round cross section, 5.00 mm or more, but less than 19.00 mm, in solid cross-sectional diameter.

Specifically excluded are steel products possessing the above-noted physical characteristics and meeting the HTSUS definitions for (a) stainless steel; (b) tool steel; (c) high nickel steel; (d) ball bearing steel; and (e) concrete reinforcing bars and rods. Also excluded are (f) free machining steel products (*i.e.*, products that contain by weight one or more of the following elements: 0.03 percent or more of lead, 0.05 percent or more of bismuth, 0.08 percent or more of sulfur, more than 0.04 percent of phosphorus, more than 0.05 percent of selenium, or more than 0.01 percent of tellurium).

Also excluded from the scope are 1080 grade tire cord quality wire rod and 1080 grade tire bead quality wire rod. This grade 1080 tire cord quality rod is defined as: (i) grade 1080 tire cord quality wire rod measuring 5.0 mm or more but not more than 6.0 mm in cross-sectional diameter; (ii) with an average partial decarburization of no more than 70 microns in depth (maximum individual 200 microns); (iii) having no non-deformable inclusions greater than 20 microns and no deformable inclusions greater than 35 microns; (iv) having a carbon segregation per heat average of 3.0 or better using European Method NFA 04-114; (v) having a surface quality with no surface defects of a length greater than 0.15 mm; (vi) capable of being drawn to a diameter of 0.30 mm or less with 3 or fewer breaks per ton, and (vii) containing by weight the following

elements in the proportions shown: (1) 0.78 percent or more of carbon, (2) less than 0.01 percent of aluminum, (3) 0.040 percent or less, in the aggregate, of phosphorus and sulfur, (4) 0.006 percent or less of nitrogen, and (5) not more than 0.15 percent, in the aggregate, of copper, nickel and chromium.

This grade 1080 tire bead quality rod is defined as: (i) grade 1080 tire bead quality wire rod measuring 5.5 mm or more but not more than 7.0 mm in cross-sectional diameter; (ii) with an average partial decarburization of no more than 70 microns in depth (maximum individual 200 microns); (iii) having no non-deformable inclusions greater than 20 microns and no deformable inclusions greater than 35 microns; (iv) having a carbon segregation per heat average of 3.0 or better using European Method NFA 04-114; (v) having a surface quality with no surface defects of a length greater than 0.2 mm; (vi) capable of being drawn to a diameter of 0.78 mm or larger with 0.5 or fewer breaks per ton; and (vii) containing by weight the following elements in the proportions shown: (1) 0.78 percent or more of carbon, (2) less than 0.01 percent of soluble aluminum, (3) 0.040 percent or less, in the aggregate, of phosphorus and sulfur, (4) 0.008 percent or less of nitrogen, and (5) either not more than 0.15 percent, in the aggregate, of copper, nickel and chromium (if chromium is not specified), or not more than 0.10 percent in the aggregate of copper and nickel and a chromium content of 0.24 to 0.30 percent (if chromium is specified).

For purposes of the grade 1080 tire cord quality wire rod and the grade 1080 tire bead quality wire rod, an inclusion will be considered to be deformable if its ratio of length (measured along the axis - that is, the direction of rolling - of the rod) over thickness (measured on the same inclusion in a direction perpendicular to the axis of the rod) is equal to or greater than three. The size of an inclusion for purposes of the 20 microns and 35 microns limitations is the measurement of the largest dimension observed on a longitudinal section measured in a direction perpendicular to the axis of the rod. This measurement methodology applies only to inclusions on certain grade 1080 tire cord quality wire rod and certain grade 1080 tire bead quality wire rod that are entered, or withdrawn from warehouse, for consumption on or after July 24, 2003.

The designation of the products as "tire cord quality" or "tire bead quality" indicates the acceptability of the product for use in the production of tire cord, tire bead, or wire for use in other

rubber reinforcement applications such as hose wire. These quality designations are presumed to indicate that these products are being used in tire cord, tire bead, and other rubber reinforcement applications, and such merchandise intended for the tire cord, tire bead, or other rubber reinforcement applications is not included in the scope. However, should petitioners or other interested parties provide a reasonable basis to believe or suspect that there exists a pattern of importation of such products for other than those applications, end-use certification for the importation of such products may be required. Under such circumstances, only the importers of record would normally be required to certify the end use of the imported merchandise.

All products meeting the physical description of subject merchandise that are not specifically excluded are included in this scope.

The products under review are currently classifiable under subheadings 7213.91.3010, 7213.91.3090, 7213.91.4510, 7213.91.4590, 7213.91.6010, 7213.91.6090, 7213.99.0031, 7213.99.0038, 7213.99.0090, 7227.20.0010, 7227.20.0020, 7227.20.0090, 7227.20.0095, 7227.90.6051, 7227.90.6053, 7227.90.6058, and 7227.90.6059 of the HTSUS. Although the HTSUS subheadings are provided for convenience and customs purposes, the written description of the scope of this proceeding is dispositive.⁵

Product Comparisons

In accordance with section 771(16) of the Act, all products produced by the respondent covered by the description in the Scope of Review section, above, and sold in Trinidad and Tobago during the POR are considered to be foreign like products for purposes of determining appropriate product comparisons to U.S. sales. We have relied on eight criteria to match U.S. sales of subject merchandise to comparison-market sales of the foreign like product: grade range, carbon content range, surface quality, deoxidation, maximum total residual content, heat treatment, diameter range, and coating. These characteristics have been weighted by the Department where appropriate. Where there were no sales of identical merchandise in the home market made in the ordinary course of trade to compare to U.S. sales, we compared U.S. sales to the next most

similar foreign like product on the basis of the characteristics listed above. As we did in the investigation, we excluded a small percentage of CIL's U.S. sales because the merchandise was damaged. *See Final Determination*. When there were no appropriate comparison market sales of comparable merchandise, we compared the merchandise sold in the United States to constructed value ("CV"), in accordance with section 773(a)(4) of the Act.

Comparisons to Normal Value

To determine whether sales of wire rod from Trinidad and Tobago were made in the United States at less than NV, we compared the EP or CEP to the NV, as described in the "Export Price and Constructed Export Price" and "Normal Value" sections of this notice. In accordance with section 777A(d)(2) of the Act, we calculated monthly weighted-average prices for NV and compared these to individual U.S. transactions.

Export Price and Constructed Export Price

For the price to the United States, we used, as appropriate, EP or CEP, in accordance with sections 772(a) and (b) of the Act. We calculated EP when the merchandise was sold by the producer or exporter outside of the United States directly to the first unaffiliated purchaser in the United States prior to importation and when CEP was not otherwise warranted based on the facts on the record. We calculated CEP for those sales where a person in the United States, affiliated with the foreign exporter or acting for the account of the exporter, made the sale to the first unaffiliated purchaser in the United States of the subject merchandise. We based EP and CEP on the packed prices charged to the first unaffiliated customer in the United States and the applicable terms of sale. When appropriate, we reduced these prices to reflect discounts.

In accordance with section 772(c)(2) of the Act, we made deductions, where appropriate, for movement expenses including inland freight, international freight, demurrage expenses, marine insurance, survey fees, U.S. customs duties and various U.S. movement expenses from arrival to delivery incurred by INA, where appropriate.

For CEP, in accordance with section 772(d)(1) of the Act, when appropriate, we deducted from the starting price those selling expenses that were incurred in selling the subject merchandise in the United States, including direct selling expenses (cost of credit, warranty, and cleaning and

coating). In addition, we deducted indirect selling expenses that related to economic activity in the United States. These expenses include certain indirect selling expenses incurred by affiliated U.S. distributors. We also deducted from CEP an amount for profit in accordance with sections 772(d)(3) and (f) of the Act.

For certain sales, CIL did not report payment dates because payment is still pending. For those sales for which payment has not yet been received, we set the payment date equal to the date of the preliminary results. We recalculated CIL's imputed credit expenses using the revised payment dates, where applicable, and the gross unit price adjusted for pricing adjustments.

Normal Value

A. Selection of Comparison Markets

To determine whether there was a sufficient volume of sales in the home market to serve as a viable basis for calculating NV, we compared CIL's volume of home market sales of the foreign like product to the volume of its U.S. sales of the subject merchandise. Pursuant to sections 773(a)(1)(B) and 773(a)(1)(C) of the Act, because CIL had an aggregate volume of home market sales of the foreign like product that was greater than five percent of its aggregate volume of U.S. sales of the subject merchandise, we determined that the home market was viable.

B. Cost of Production Analysis

1. Calculation of COP

Before making any comparisons to NV, we conducted a COP analysis of CIL, pursuant to section 773(b) of the Act, to determine whether the respondent's comparison market sales were made below the COP. We calculated the COP based on the sum of the cost of materials and fabrication for the foreign like product, plus amounts for selling, general, and administrative expenses ("SG&A") and packing, in accordance with section 773(b)(3) of the Act. We relied on CIL's information as submitted.

2. Test of Comparison Market Prices

As required under section 773(b)(2) of the Act, we compared the weighted-average COP to the per-unit price of the comparison market sales of the foreign like product, to determine whether these sales had been made at prices below the COP within an extended period of time in substantial quantities, and whether such prices were sufficient to permit the recovery of all costs within a reasonable period of time. We

⁵ Effective January 1, 2004, CBP reclassified certain HTSUS numbers related to the subject merchandise. See http://hotdocs.usitc.gov/tariff_chapters_current/toc.html.

determined the net comparison market prices for the below-cost test by subtracting from the gross unit price any applicable movement charges, discounts, rebates, direct and indirect selling expenses (also subtracted from the COP), and packing expenses.

3. Results of COP Test

Pursuant to section 773(b)(2)(C)(i) of the Act, where less than 20 percent of sales of a given product were at prices less than the COP, we did not disregard any below-cost sales of that product because we determined that the below-cost sales were not made in "substantial quantities." Where 20 percent or more of a respondent's sales of a given product during the POR were at prices less than the COP, we determined such sales to have been made in "substantial quantities." See section 773(b)(2)(C) of the Act. The sales were made within an extended period of time, in accordance with section 773(b)(2)(B) of the Act, because they were made over the course of the POR. In such cases, because we compared prices to POR-average costs, we also determined that such sales were not made at prices which would permit recovery of all costs within a reasonable period of time, in accordance with section 773(b)(2)(D) of the Act. Therefore, for purposes of this administrative review, we disregarded below-cost sales of a given product and used the remaining sales as the basis for determining NV, in accordance with section 773(b)(1) of the Act. See Preliminary Calculation Memorandum for Caribbean Ispat Ltd., dated November 1, 2004, on file in the Central Records Unit, room B099, for our calculation methodology and results.

C. Calculation of Normal Value Based on Comparison Market Prices

We based home market prices on the packed prices to unaffiliated purchasers in Trinidad and Tobago. We adjusted the starting price for foreign inland freight pursuant to section 773(a)(6)(B)(ii) of the Act. In addition, for comparisons made to EP sales, we made adjustments for differences in circumstances of sale ("COS") pursuant to section 773(a)(6)(C)(iii) of the Act. We made COS adjustments by deducting direct selling expenses incurred for home market sales (credit expense and warranty) and adding U.S. direct selling expenses (credit, warranty, and cleaning and coating expenses directly linked to sales transactions). For comparisons made to CEP sales, we did not add U.S. direct selling expenses. No other adjustments to NV were claimed or allowed.

When comparing U.S. sales with comparison market sales of similar, but not identical, merchandise, we also made adjustments for physical differences in the merchandise in accordance with section 773(a)(6)(C)(ii) of the Act and section 351.411 of the Department's regulations. We based this adjustment on the difference in the variable cost of manufacturing for the foreign like product and subject merchandise, using POR-average costs.

D. Calculation of Normal Value Based on Constructed Value

When we could not determine the NV based on comparison market sales because there were no contemporaneous sales of a comparable product, we compared the EP to CV. In accordance with section 773(e) of the Act, we calculated CV based on the sum of the cost of manufacturing of the product sold in the United States, plus amounts for SG&A expenses, profit, and U.S. packing costs. In accordance with section 773(e)(2)(A) of the Act, we based SG&A expenses and profit on the amounts incurred by CIL in connection with the production and sale of the foreign like product in the comparison market.

For price-to-CV comparisons, we made adjustments to CV for COS differences, in accordance with section 773(a)(8) of the Act and 19 CFR 351.410. We made COS adjustments by deducting direct selling expenses incurred on comparison market sales.

E. Level of Trade/Constructed Export Price Offset

In accordance with section 773(a)(1)(B)(i) of the Act, to the extent practicable, we determine NV based on sales in the comparison market at the same level of trade ("LOT") as the EP or CEP transaction. The NV LOT is that of the starting-price sales in the comparison market or, when NV is based on CV, that of the sales from which we derive SG&A expenses and profit. For EP sales, the U.S. LOT is also the level of the starting-price sale, which is usually from exporter to importer. For CEP transactions, it is the level of the constructed sale from the exporter to the importer.

To determine whether NV sales are at a different LOT than EP or CEP transactions, we examine stages in the marketing process and selling functions along the chain of distribution between the producer and the unaffiliated customer. If the comparison market sales are at a different LOT and the difference affects price comparability, as manifested in a pattern of consistent price differences between the sales on

which NV is based and comparison market sales at the LOT of the export transaction, we make an LOT adjustment under section 773(a)(7)(A) of the Act. For CEP sales, if the NV level is more remote from the factory than the CEP level and there is no basis for determining whether the difference in the levels between NV and CEP affects price comparability, we adjust NV under section 773(a)(7)(B) of the Act (the CEP-offset provision).

In implementing these principles in this review, we obtained information from CIL about the marketing stages involved in the reported U.S. and home market sales, including a description of the selling activities performed by CIL for each channel of distribution. In identifying LOTs for EP and home market sales we considered the selling functions reflected in the starting price before any adjustments. For CEP sales, we considered only the selling activities reflected in the price after the deduction of expenses pursuant to section 772(d) of the Act.

In the home market, CIL reported sales to end-users as its only channel of distribution. In the U.S. market, CIL reported sales through two channels of distribution, one involving sales made directly by CIL to end-users and, occasionally, trading companies, and the second involving sales made by CIL's affiliated U.S. resellers to end-users. We have determined that the sales made by CIL directly to U.S. customers are EP sales and those made by CIL's affiliated U.S. resellers constitute CEP sales.

We found the home market and EP sales to be at the same LOT. CIL's EP sales and home market sales were both made primarily to end-users. In both cases, the selling functions performed by CIL were almost identical in both markets. Other than freight & delivery arrangement, which was only provided for U.S. sales, and sales force development, which was only provided in the home market, in both markets CIL provided services such as: strategic and economic planning, sales forecasting, solicitation of orders, technical advice, price negotiation, processing purchase orders, invoicing, extending credit, managing accounts receivable, and making arrangements for warranty related to sales. It was therefore unnecessary to make an LOT adjustment for comparison of EP and home market prices.

CIL makes CEP sales to the United States through its affiliates, INA and Walker Wire. Sales through CIL's affiliates are normally made to unrelated end-users in the U.S. market. CIL's affiliates perform all of the selling

functions, such as making freight and delivery arrangements, sales force development, market research, solicitation of orders, technical advice, negotiating prices, invoicing, acting as mill and customer liaison, repairing and cleaning coils, and making arrangements for warranty related to sales. However, because in our LOT analysis for CEP sales we only consider the selling activities reflected in the price after the deduction of the expenses incurred by the U.S. affiliate, the record indicates that for CIL's CEP sales there are substantially fewer services performed than for the sales in its home market. Therefore, we have determined that CIL's home market sales are made at a different, and more advanced, stage of marketing than the LOT of the CEP sales.

Accordingly, we determined that an LOT adjustment may be appropriate when comparing to CEP sales. However, the data available does not permit a determination that there is a pattern of consistent price differences between sales at different LOTs in the home market, as there is only one LOT in the home market. Therefore, because CIL's home market sales are made at a different, and more advanced, stage of marketing than the LOT of the CEP sales, we have made a CEP offset to CIL's NV in accordance with section 773(a)(7)(B) of the Act. This offset is equal to the amount of indirect expenses incurred in the home market not exceeding the amount of the deductions made from the U.S. price in accordance with 772(d)(1)(D) of the Act.

Currency Conversion

For purposes of these preliminary results, we made currency conversions in accordance with section 773A(a) of the Act, based on the official exchange rates in effect on the dates of U.S. sales, as obtained from the Federal Reserve Bank.

Preliminary Results of Review

As a result of our review, we preliminarily determine that the following percentage weighted-average margins exist for the period April 10, 2002, through September 30, 2003:

Manufacturer/exporter	Margin (percent)
Caribbean Ispat Limited	3.45
All Others	12.38

The Department will disclose calculations performed within five days of the date of publication of this notice to the parties of this proceeding in accordance with 19 CFR 351.224(b). An interested party may request a hearing

within 30 days of publication of these preliminary results. See 19 CFR 351.310(c). Any hearing, if requested, ordinarily will be held 44 days after the date of publication, or the first working day thereafter. Interested parties may submit case briefs no later than 30 days after the date of publication of these preliminary results of review. Rebuttal briefs limited to issues raised in such briefs, may be filed no later than 35 days after the date of publication. Parties who submit arguments are requested to submit with the argument (1) a statement of the issue, and (2) a brief summary of the argument. Further, parties submitting written comments are requested to provide the Department with an additional copy of the public version of any such comments on diskette. The Department will issue the final results of this administrative review, which will include the results of its analysis of issues raised in any such comments, or at a hearing, if requested, within 120 days of publication of these preliminary results.

Assessment Rate

Pursuant to 19 CFR 351.212(b), the Department calculated an assessment rate for each importer of the subject merchandise. Upon issuance of the final results of this administrative review, if any importer-specific assessment rates calculated in the final results are above *de minimis* (i.e., at or above 0.5 percent), the Department will issue appraisal instructions directly to CBP to assess antidumping duties on appropriate entries by applying the assessment rate to the entered value of the merchandise. For assessment purposes, we calculated importer-specific assessment rates for the subject merchandise by aggregating the dumping margins for all U.S. sales to each importer and dividing the amount by the total entered value of the sales to that importer.

Cash Deposit Requirements

To calculate the cash deposit rate for each producer and/or exporter included in this administrative review, we divided the total dumping margins for each company by the total net value for that company's sales during the review period.

The following deposit rates will be effective upon publication of the final results of this administrative review for all shipments of wire rod from Trinidad and Tobago entered, or withdrawn from warehouse, for consumption on or after the publication date, as provided by section 751(a)(2)(C) of the Act: (1) The cash deposit rate for the company listed above will be the rate established in the final results of this review, except if the

rate is less than 0.5 percent and, therefore, *de minimis*, the cash deposit will be zero; (2) for previously reviewed or investigated companies not listed above, the cash deposit rate will continue to be the company-specific rate published for the most recent final results in which that manufacturer or exporter participated; (3) if the exporter is not a firm covered in this review, a prior review, or the original less than fair value ("LTFV") investigation, but the manufacturer is, the cash deposit rate will be the rate established for the most recent final results for the manufacturer of the merchandise; and (4) if neither the exporter nor the manufacturer is a firm covered in this or any previous review conducted by the Department, the cash deposit rate will be 12.38 percent, the "All Others" rate established in the LTFV investigation. See *Final Determination*.

These cash deposit requirements, when imposed, shall remain in effect until publication of the final results of the next administrative review.

Notification to Importers

This notice serves as a preliminary reminder to importers of their responsibility under 19 CFR 351.402(f) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in the Secretary's presumption that reimbursement of antidumping duties occurred and the subsequent assessment of double antidumping duties.

This administrative review is issued and published in accordance with sections 751(a)(1) and 777(i)(1) of the Act.

Dated: November 1, 2004.

James J. Jochum,

Assistant Secretary for Import Administration.
