Additional study requests and requests for cooperating agency status may be filed electronically via the Internet in lieu of paper. The Commission strongly encourages electronic filings. n. The proposed project would be built at the Mill Coulee Canal's Upper and Lower Mill Coulee drop structures, which are reinforced concrete structures 290 and 190 feet long, respectively. The total drop for the two structures is 101.6 feet. The applicant proposes to construct: (1) A check structure, consisting of a spillway gate panel anchored to a ballast concrete structure spanning the full width of the canal floor between new concrete abutment walls, upstream from the concrete transition of the Upper Mill Coulee chute drop; (2) an intake structure to divert flows from the left side of the canal; (3) a 48-inch-diameter, 1,400-foot-long pre-stressed concrete, tape-coated steel, or polyethylene penstock that would be completely buried; (4) a powerhouse containing one horizontal Francis turbine and one generator with a rated output of 1.05 MW; (5) a draft tube and 2,650-foot-long tailrace discharging flows into the canal below the Lower Mill Coulee drop structure; (6) a switchyard immediately adjacent to the powerhouse; and (7) a 0.7-mile-long, 69-kV transmission line extending from the switchyard to interconnect with an existing Sun River Electric Cooperative transmission line. The project would use flows as they are provided in accordance with the needs of the Greenfield Irrigation District, which operates the canal. The project

would not impound water and would be operated strictly as a run-of-river plant. Average annual generation would be 2,430,000 kilowatt-hours.
