POLICY JUSTIFICATION (U)

Kuwait - TOW-2A/B Anti-armor Guided Missiles

The Government of Kuwait has requested a possible sale of

Major Defense Equipment (MDE)

<u>Anti-armor guided missiles</u>	<u>Fly-to-buy missiles</u>
288 TOW-2A	4 TOW-2A
140 TOW-2B	4 TOW-2B

Also included are spare and repair parts, supply support, publications and technical data, engineering change proposals, U.S. Government and contractor technical and logistics personnel services and other related elements of program support. The estimated cost is \$19 million.

This proposed sale will contribute to the foreign policy and national security of the United States by helping to improve the security of a major non-NATO ally which has been, and continues to be, an important force for political stability and economic progress in the Middle East. Additionally, the proposed sale will provide a signal of the U.S. Government commitment to our bilateral relationship.

Kuwait will use these TOW-2 missiles to upgrade its air-to-surface day/night anti-armor defense capability and provide close air support for the military ground forces. Kuwait will augment its land forces with these TOW-2B anti-armor guided missiles. This weapon sale will greatly enhance the coalition efforts within the region. Kuwait, which already has TOW-2 missiles in its inventory, will have no difficulty absorbing these additional missiles.

The proposed sale of this equipment and support will not affect the basic military balance in the region.

The prime contractor will be the Raytheon Corporation of Mesa, Arizona. There are no known offset agreements proposed in connection with this potential sale.

Implementation of this proposed sale will not require the assignment of any additional U.S. Government or contractor representatives to Kuwait.

There will be no adverse impact on U.S. defense readiness as a result of this proposed sale.

Transmittal No. 05-38**Notice of Proposed Issuance of Letter of Offer
Pursuant to Section 36(b)(1)
of the Arms Export Control Act****Annex
Item No. vii****(vii) Sensitivity of Technology:**

1. The TOW-2 Weapon System hardware and documentation provided with this proposed sale are Unclassified, however, sensitive technology is contained within the system itself. This sensitivity is primarily in the software programs, which instruct the system how to operate in the presence of countermeasures. Programs are contained in the system in the form of microprocessors with only Read out Memory maps being available, which do not provide the software program itself. The overall hardware is also considered sensitive in that the modulation frequency and infrared wavelengths could be useful in attempted countermeasure development.

2. The Radio Frequency (RF) TOW-2A configuration is the direct attack version of the TOW family of missiles capable of defeating modern threat targets. It consists of a single main warhead and a standoff probe. The probe contains a precursor charge that detonates upon contact with the target for pre-emptive removal of reactive armor. The main charge is detonated by a subsequent timed interval or by contact with the target.

3. The RF TOW-2B configuration is the top attack version of the TOW family of missiles capable of defeating modern threat targets. The TOW-2B warhead consists of dual Explosively Formed Penetrators (EFP) designed to fire downward over the top of the target thus penetrating the target with catastrophic results.

4. If a technologically advanced adversary were to obtain knowledge of the specific hardware and software elements, the information could be used to develop countermeasures which might reduce weapon system effectiveness or be used in the development of a system with similar or advanced capabilities.
