SUPPLEMENTARY INFORMATION

I. Abstract

The U.S. Census Bureau plans to conduct a new survey to measure research and development supported and performed by State Governments in the United States. This survey will be a joint effort between the Census Bureau and the National Science Foundation (NSF).

The NSF Act of 1950 includes a statutory charge to "provide a central clearinghouse for the collection, interpretation, and analysis of data on scientific and engineering resources and to provide a source of information for policy formulation by other agencies in the Federal Government." Under the aegis of this legislative mandate, NSF and its predecessors have sponsored

surveys of research and development since 1953, including the Survey of Industrial Research and Development. This new survey will expand the scope of research and development collections to include State governments, for which there are no established collection efforts.

Items on the survey form will include sources of funding for research and development, recipients of funding (if external to the government agency), and type of research and development by character (*i.e.*, basic, applied, or developmental). Final results produced by NSF will contain State and national estimates useful to a variety of data users interested in research and development performance including: the National Science Board; the Office of Management and Budget; the Office of Science and Technology Policy and other science policy makers; institutional researchers; and private organizations.

II. Method of Collection

The survey will be mailed to the universe of approximately 1000 non-educational State government agencies. All respondents will be sent a mailed questionnaire, but will have the option of choosing a preferred submission method. Respondents will have the option of submitting data by completing and returning the mailed questionnaire, or by completing a Web form over the Internet.
