NUCLEAR REGULATORY COMMISSION

Proposed Generic Communication; Post-Fire Safe-Shutdown Circuit Analysis Spurious Actuations

AGENCY: Nuclear Regulatory
Commission.

ACTION: Notice of opportunity for public
comment.

SUMMARY: The U.S. Nuclear Regulatory
Commission (NRC) is proposing to issue
a generic letter (GL) to:

(1) Request addressees to review their
fire protection program to confirm
compliance with existing applicable
regulatory requirements regarding their
assumptions of the phrase "one-at-a-
time" in light of the information
provided in this GL and, if appropriate,
take additional actions to return to
compliance. Specifically, although some
licensees have performed their post-fire,
safe-shutdown circuit analyses based on
an assumption of only a single spurious
actuation per fire event or that spurious
actuations will occur "one-at-a-time,"
recent industry cable fire test results
demonstrated that these assumptions
are not valid.

(2) Require addressees to submit a
written response to the NRC in
accordance with NRC regulations in
Title 10 of the Code of Federal
Regulations, Section 50.54(f) (10 CFR
50.54(f)).

This **Federal Register** notice is
available through the NRC's
Agencywide Documents Access and
Management System (ADAMS) under
accession number ML051650017.

DATES: Comment period expires [60
days after FRN is published]. Comments
submitted after this date will be

considered if it is practical to do so, but
assurance of consideration cannot be
given except for comments received on
or before this date.

ADDRESSES: Submit written comments
to the Chief, Rules and Directives
Branch, Division of Administrative
Services, Office of Administration, U.S.
Nuclear Regulatory Commission, Mail
Stop T6-D59, Washington, DC 20555-
0001, and cite the publication date and
page number of this **Federal Register**
notice. Written comments may also be
delivered to NRC Headquarters, 11545
Rockville Pike (Room T-6D59),
Rockville, Maryland, between 7:30 am
and 4:15 pm on Federal workdays.

SUPPLEMENTARY INFORMATION: NRC
Generic Letter 2005-Xx; Post-Fire Safe-
Shutdown Circuit Analysis Spurious
Actuations.

Addresses

All holders of operating licenses for
nuclear power reactors, except those
who have permanently ceased
operations and have certified that fuel
has been permanently removed from the
reactor vessel.

Purpose

The U.S. Nuclear Regulatory
Commission (NRC) is issuing this
generic letter (GL) to:

(1) Request addressees to review their
fire protection program to confirm
compliance with existing applicable
regulatory requirements regarding their
assumptions of the phrase "one-at-a-
time" in light of the information
provided in this GL and, if appropriate,
take additional actions to return to
compliance. Specifically, although some
licensees have performed their post-fire,
safe-shutdown circuit analyses based on
an assumption of only a single spurious
actuation per fire event or that spurious
actuations will occur "one-at-a-time,"
recent industry cable fire test results
demonstrated that these assumptions
are not valid.

(2) Require addressees to submit a
written response to the NRC in
accordance with NRC regulations in
Title 10 of the Code of Federal
Regulations, Section 50.54(f) (10 CFR
50.54(f)).

The reason for this request is that the
results from the Electric Power Research
Institute (EPRI)/Nuclear Energy Institute
(NEI) cable fire tests showed a relatively
high probability of multiple spurious
actuations occurring simultaneously or

in rapid succession during or after a fire
(ref. EPRI Report No. 1006961,
"Spurious Actuation of Electrical
Circuits Due to Cable Fires: Results of
an Expert Elicitation," dated May 2002
and NUREG/CR-6776, "Cable Insulation
Resistance Measurements Made During
Cable Fire Tests," dated June 2002).
Some licensees have assumed only a
single spurious actuation, and others
have assumed that multiple spurious
actuations can only occur "one-at-a-
time," with sufficient delay between
actuations to allow for mitigation. The
EPRI/NEI test data clearly show that the
use of "one-at-a-time" spurious
actuations assumption is not credible. If
multiple spurious actuations occurring
simultaneously or in rapid succession
during or after a fire have not been
considered by licensees in their post-fire
safe-shutdown circuit analysis, it is
possible that they are not in compliance
with 10 CFR 50.48 and 10 CFR Part 50,
General Design Criterion (GDC) 3. The
licensees who conclude that they are no
longer in compliance with 10 CFR 50.48
and 10 CFR Part 50, GDC 3, based on the
information provided in this GL, are
expected to come into compliance with
10 CFR 50.48 and 10 CFR Part 50, GDC
3, using risk-informed or deterministic
methods as appropriate to their
licensing basis.

Background

The regulatory requirements for post-
fire safe shutdown are given in 10 CFR
50.48 and 10 CFR Part 50, Appendix A,
GDC 3. Additionally, all nuclear power
plants (NPPs) licensed to operate before
January 1, 1979, are required to comply
with 10 CFR Part 50, Appendix R,
Section III.G, "Fire Protection of Safe
Shutdown Capability." All NPPs
licensed to operate after January 1, 1979,
were evaluated against Section 9.5.1 of
NUREG-0800, Standard Review Plan
(SRP). The fire protection plan (FPP)
and the associated safety evaluation
report (SER) are specifically
incorporated into those plants' licensing
bases. All NPP licensees are responsible
for meeting fire protection commitments
and license conditions made during the
establishment of their fire protection
program.

The objective of the fire protection
requirements and guidance is to provide
reasonable assurance that one train of
systems necessary to achieve and
maintain hot shutdown is free of fire
damage. This includes protecting
circuits whose fire-induced failure
could prevent the operation, or cause
maloperation, of equipment necessary to
achieve and maintain post-fire safe
shutdown. As part of its fire protection
program, each licensee performs a
