

Needs and Uses: The Commission is submitting this information collection to OMB as an extension (no change in reporting requirements) in order to obtain the full three-year clearance from them.

The Commission conducts an audit of the construction and/or operational status of various wireless radio stations in its licensing database that are subject to rule-based construction and operational requirements. The Commission's rules for these wireless services require construction within a specified time frame and require a station to remain operational in order for the license to remain valid. The Commission uses this information to ensure that licensees' stations are constructed and currently operating in accordance with the parameters of the current FCC authorization and rules.

I. Background

1. On February 21, 2006, the Wireless Telecommunications Bureau (Bureau)

announced the procedures for the upcoming auction of new nationwide commercial Air-Ground Radiotelephone Service licenses in the 800 MHz band scheduled for May 10, 2006 (Auction No. 65). The Bureau clarifies how previously-announced procedures will take into account the Commission's requirement that no individual or entity may hold, directly or indirectly, a controlling interest in licenses authorizing the use of more than three megahertz of spectrum.

2. Two nationwide commercial licenses in the 800 MHz band will be assigned based on the results of Auction No. 65. Due to the restriction on any party holding a controlling interest in licenses authorizing the use of more than three megahertz of spectrum, no party may hold a controlling interest in more than one license to be assigned by Auction No. 65. Accordingly, the procedures of Auction No. 65 will not assign both licenses to any single applicant or to multiple applicants that, based on their short-form auction applications (FCC Form 175), share a common controlling interest.

A. Provisionally Winning Bids

3. In the *Auction No. 65 Procedures Public Notice*, 71 FR 11645 (March 8, 2006), the Commission stated that, at the end of each bidding round, the FCC Auction System will determine the provisionally winning bids by determining which combination of licenses comprising a single band plan has the highest aggregate gross bid amount by considering all of the bids that have been placed in the auction subject to the restriction that a single bidder cannot have more than one provisionally winning bid. Given that the restriction on holding more than one license applies not only to a single bidder but also to multiple bidders sharing a common controlling interest, the following more comprehensively describes how provisionally winning bids will be determined. At the end of each bidding round, the FCC Auction System will determine which combination of licenses comprising a single band plan has the highest aggregate gross bid amount by considering all of the bids that have been placed in the auction subject to the restriction that neither a single bidder nor multiple bidders sharing a common controlling interest, as disclosed on their short-form auction applications, can have more than one provisionally winning bid.

4. The restrictions used in the process of determining provisionally winning bids will not impose any restriction on bids that otherwise may be placed. That
