

time ranging from hours to weeks. This technology is an improvement of the microbead technology described in U.S. Patent No. 5,759,582.

Applications: This technology has two commercial applications. The first is a pharmaceutical drug delivery application. The bead allows the incorporated protein or drug to be delivered locally at high concentration, ensuring that therapeutic levels are reached at the target site while reducing side effects by keeping systemic concentration low. This microbead accomplishes this while protecting the biologically active protein from harsh conditions traditionally encountered during microbead formation/drug formulation.

The microbeads are inert, biodegradable, and allow a sustained release or multiple-release profile of treatment with various active agents without major side effects. In addition, the bead maintains functionality under physiological conditions.

Second, the microbead and microparticles can be used in various research assays, such as isolation and separation assays, to bind target proteins from biological samples. A disadvantage of the conventional methods is that the proteins become denatured. The denaturation results in incorrect binding studies or inappropriate binding complexes being formed. The instant technology corrects this disadvantage by using a bead created in a more neutral pH environment. It is the same environment that is used for the finding of the protein of interest as well.

Methods and Compositions Related to GHS-R Antagonist

Description of Technology: This invention describes that additional functional role for D-Lys3 GHRP-6 (a known GHS-R antagonist, peptide) as a blocker of two well-known chemokine receptors, namely CCR5 and CXCR4. These receptors are major HIV co-receptors and are critical for HIV binding, fusion and entry into human T cells, monocytes, dendritic cells, and various other cells within the body.

Moreover, these receptors and their ligands play a major role in inflammation and a variety of acute and chronic disease states. Overall, these two mammalian chemokine receptors are currently major drug targets for treatment of AIDS, cancer and many immunoregulatory disorders. Many identified antagonists block one or the other receptor. Since D-Lys3 GHRP-6 actually binds and blocks both these chemokine receptors at the same time hindering their activity and HIV infectivity, D-Lys3 GHRP-6 may be a good therapeutic candidate for treatment of AIDS and inflammatory diseases.

National Cancer Institute; Notice of Meeting

Pursuant to section 10(a) of the Federal Advisory Committee Act, as amended (5 U.S.C. appendix 2), notice is hereby given of a meeting of the Advisory Committee to the Director, National Cancer Institute.

The meeting will be open to the public, with attendance limited to space available. Individuals who plan to attend and need special assistance, such as sign language interpretation or other reasonable accommodations, should notify the Contact Person listed below in advance of the meeting.

Name of Committee: Advisory Committee to the Director, National Cancer Institute.

Date: August 9, 2006

Time: 1 p.m. to 2 p.m.

Agenda: Review of Adolescent and Young Adult Oncology Progress Review Group Report.

Place: National Institutes of Health, Building 31, Room 11A48, 31 Center Drive, Bethesda, MD 20892, (Telephone Conference Call).

Contact Person: Cherie Nichols, Director of Science Planning and Assessment, National Cancer Institute, Building 6116, Room 205, Bethesda, MD 20892, (301) 496-5515.

Any interested person may file written comments with the committee by forwarding the statement to the Contact Person listed on this notice. The statement should include the name, address, telephone number and when applicable, the business or professional affiliation of the interested person.

Information is also available on the Institute's home page: deainfo.nci.nih.gov/advisory/joint/htm, where an agenda and any additional information for the meeting will be posted when available.
