AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of document availability.

SUMMARY: We, the U.S. Fish and Wildlife Service, announce the availability of the Recovery Plan for the Nosa Luta or Rota Bridled White-eye (*Zosterops rotensis*). This species, which is found only on the island of Rota in the Commonwealth of the Northern Mariana Islands, was federally listed as endangered in 2004.

ADDRESSES: Copies of the recovery plan are available by request from the U.S. Fish and Wildlife Service, Pacific Islands Fish and Wildlife Office, 300 Ala Moana Boulevard, Room 3-122, Box 50088, Honolulu, Hawaii 96850 (phone: 808/792-9400). SUPPLEMENTARY INFORMATION:

Background

Recovery of endangered or threatened animals and plants is a primary goal of the Endangered Species Act (Act) (16 U.S.C. 1531 *et seq.*) and our endangered species program. Recovery means improvement of the status of listed species to the point at which listing is no longer required under the criteria in section 4(a)(1) of the Act. Recovery plans describe actions considered necessary for the conservation of the species, establish criteria for downlisting or delisting listed species, and estimate time and cost for implementing the measures needed for recovery.

The Act requires the development of recovery plans for endangered or threatened species unless such a plan would not promote the conservation of the species. Recovery plans help guide the recovery effort by describing actions considered necessary for the conservation of the species, and estimating time and cost for implementing the measures needed for recovery.

Section 4(f) of the Act requires that public notice and an opportunity for public review and comment be provided during recovery plan development. In fulfillment of this requirement, the Draft Recovery Plan for the Nosa Luta or Rota Bridled White-eye (*Zosterops rotensis*) was made available for public comment from September 19 to November 20, 2006 (71 FR 54838). Information provided during the public comment period was considered in our preparation of this recovery plan, and is summarized in an appendix to the plan.

The nosa Luta, or Rota bridled white-eye, is an endemic bird of the island of Rota in the Mariana archipelago and was federally listed as endangered in 2004 (69 FR 3022). In 1999, the population was estimated to be approximately 1,000 individuals and the species' core range consisted of approximately 628 acres (254 hectares) of forest above 490 feet (150 meters) elevation. Available information indicates that habitat loss and degradation and predation by introduced rats (*Rattus* spp.) and black drongos (*Dicrurus macrocercus*) may be having some impact on the nosa Luta population. Due to its restricted range and small population size, the species is also highly susceptible to random catastrophic events like typhoons and the accidental introduction of new predators like the brown treesnake (*Boiga irregularis*), and avian diseases
