development of specialized tools and processes. Moreover, this effort may result in the potential spread of contamination within the SFP water. The filters have degraded over time and any recovery attempts may result in the possible discharge of fuel pellets or fuel fragments into the SFP. Further, removal of the loose pellets and fuel fragments from the container would be difficult as a result of this material (fuel pellets) being entangled within the filter medium.

Environmental Impacts of the Proposed Action

NRC has completed its safety evaluation of the proposed action and concludes that the underlying purposes of 10 CFR 74.19(c) is to ensure that SNM is properly accounted for, appropriately secured and authorities are informed of any theft, diversion, or loss. Allowing the licensee to address the physical inventory of the loose fuel pellets within the pellet-can by the use of a video inspection of the interior without disturbing the contents will assure that the SNM in the pellet-can is accounted for. Limiting the movement of the pellet-can will assure that, in its degraded condition, it will not fail and potentially allow the fuel pellets to become lost in the SFP. Therefore, there is no undue risk to public health and safety.

The details of the staff's safety evaluation will be provided in the exemption that will be issued as part of the letter to the licensee approving the exemption to the regulation.

The proposed action will not significantly increase the probability or consequences of accidents. No changes are being made in the types of effluents that may be released off site. Granting the proposed exemption request will not result in a significant increase in the amount of any effluent released off-site nor will it result in any significant increase in occupational or public radiation exposure. Therefore, there are no significant radiological environmental impacts associated with the proposed action.

With regard to potential non-radiological impacts, the proposed action does not have a potential to cause effects on any historic properties. It does not affect non-radiological plant effluents and has no other environmental impact. Therefore, there are no significant non-radiological environmental impacts associated with the proposed action.

Accordingly, the NRC concludes that there are no significant environmental impacts associated with the proposed action. Environmental Impacts of the Alternatives to the Proposed Action

As an alternative to the proposed action, the staff considered denial of the proposed action (i.e., the "no-action" alternative). Denial of the application would result in no change in current environmental impacts. The environmental impacts of the proposed action and the alternative action are similar.

Alternative Use of Resources

The action does not involve the use of any different resources than those previously considered in the "Generic Environmental Impact Statement for License Renewal of Nuclear Plants, Supplement 8 (Regarding McGuire Nuclear Station Units 1 and 2)," NUREG—1437, dated December 2002.

Agencies and Persons Consulted

In accordance with its stated policy, on March 10, 2007, the staff consulted with the North Carolina State official, Dale Dusenbury of the North Carolina Department of Environment and Natural Resources, regarding the environmental impact of the proposed action. The State official had no comments.

Finding of No Significant Impact

On the basis of the environmental assessment, the NRC concludes that the proposed action will not have a significant effect on the quality of the human environment. Accordingly, the NRC has determined not to prepare an environmental impact statement for the proposed action.

For further details with respect to the proposed action, see the licensee's letter dated December 3, 2007. Documents may be examined, and/or copied for a fee, at the NRC's Public Document Room (PDR), located at One White Flint North, Public File Area O1 F21, 11555 Rockville Pike (first floor), Rockville, Maryland. Publicly available records will be accessible electronically from the Agencywide Documents Access and Management System (ADAMS) Public Electronic Reading Room on the Internet at the NRC Web site, http:// www.nrc.gov/reading-rm/adams.html.
