SUPPLEMENTARY INFORMATION:

Background

On February 17, 2009, the Recovery Act was enacted to assist those most impacted by the recession by creating and preserving jobs and promoting economic recovery. The funding was specified for multiple areas of national interest. TSA received \$1 billion to invest in the procurement and installation of checked baggage explosives detection systems and checkpoint explosives detection

equipment to be obligated by September 30, 2010. Approximately \$500 million in Recovery Act funding will be allocated to facility modification projects to be administered through TSA's EBSP. This program directly benefits the traveling public, air carriers, airport authorities, and our Nation as a whole.

TSA's EBSP supports the DHS goals of protecting our Nation from dangerous goods and protecting our Nation's critical transportation infrastructure by strengthening screening of checked baggage to reduce the probability of a successful terrorist or other criminal attack to the air transportation system. Since December 31, 2002, EBSP has been responsible for ensuring 100 percent screening of checked baggage in the United States. The EBSP's objective is to deter, detect, mitigate, and prevent transportation of explosives or other prohibited items in checked baggage on commercial aircraft. One significant way EBSP accomplishes its objectives is through the construction of Checked Baggage Inspection Systems (CBIS). These projects form the backbone of TSA's EBSP and represent the highest level of baggage screening capability in terms of processing efficiency and security. TSA has identified twenty-six airports across the country with "shovel ready" facility modification projects that include CBIS construction. These projects are dependent on Recovery Act funding. Several of these projects, however, are on hold and in jeopardy because of concerns over compliance with sec. 1605(a).

Section 1605(a) of the Recovery Act, the buy American provision, states that none of the funds appropriated by the Act, including the funds that have been dedicated to project awards under EBSP, "may be used for a project for the construction, alteration, maintenance, or repair of a public building or public work unless all of the iron, steel, and manufactured goods used in the project are produced in the United States." Subsections 1605(b) and (c) of the Recovery Act authorize the head of a Federal department or agency to waive the buy American provision by finding that: (1) Applying the provision would be inconsistent with the public interest; (2) the relevant goods are not produced in the United States in sufficient and reasonably available quantities and of a satisfactory quality; or (3) the inclusion of the goods produced in the United States will increase the cost of the project by more than 25 percent. If the head of the Federal department or agency waives the buy American provision, then the head of the department or agency is required to

publish a detailed justification in the **Federal Register**. Finally, sec. 1605(d) of the Recovery Act states that the buy American provision must be applied in a manner consistent with the United States' obligations under international agreements.

Public Interest Finding

The Secretary of Homeland Security has determined that it would be inconsistent with the public interest—and particularly with the Recovery Act's directives to ensure expeditious spending of construction funds consistent with prudent management, as cited above—to apply the buy American requirement to an entire CBIS project where at least 95 percent of the costs of the project will comply with sec. 1605(a).

A CBIS is a highly sophisticated electromechanical system for screening checked baggage. It consists of hundreds of mechanical and electrical items. It includes a mechanical conveyor system or baggage handling system (BHS) that transports checked baggage through the system. The CBIS also features a security screening matrix area where baggage is fed through one or more Explosion Detection Systems (EDS) or Explosive Trace Detection (ETD) systems to be analyzed. All of the mechanical and electrical items and processes that make up the CBIS are controlled by a central programmable logic controller (PLC) or programmable controller. The PLC is essentially a computer 'brain' used for the automation of electro-mechanical processes, such as the control of machinery on factory assembly lines. The PLC controls all aspects of the CBIS including conveyor belt speeds, baggage tracking and managing the BHS merge points or windows.

CBIS projects are comprised of thousands of manufactured goods, such as conveyor, conveyor motor drives, electrical and communications controls, programmable logic controllers, electronic tracking devices, high speed diverters, vertical sorters, specialty fasteners and switches. Not all of these items are domestically available. Furthermore, in many instances, the geographic origin of the equipment is not readily ascertainable. While arguably the Secretary of Homeland Security could have relied on the authority under sec. 1605(b)(2) (non-availability waiver), the burden placed on TSA and contractors in sourcing and evaluating equipment availability would be unduly burdensome, impracticable and not in keeping with the Recovery Act's overall goal of expeditious spending of recovery funds.
