- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology,

e.g., permitting electronic submission of responses.

Agency: Mine Safety and Health Administration.

Type of Review: Extension without change of currently approved collection.

Title of Collection: Record of Mine Closures, Opening and Reopening of Mines.

OMB Control Number: 1219–0073.

Form Number: None.

Estimated Number of Respondents: 1,453.

Estimated Total Annual Burden Hours: 14,572.

Estimated Total Annual Cost Burden: \$18,221,257.

Description: The Department's regulations at 30 CFR 75.372, 75.373, 75.1200, 75.1200–1, 75.1201, 75.1202, 75.1202–1, 75.1203, 75.1204, 75.1204–1, 75.1721, 77.1200, 77.1201, 77.1202 contain requirements regarding the preparation and maintenance of accurate and up-to-date mine maps as well as requirements with respect to reporting to MSHA the opening or closing of mines. The information is used by operators of coal mines for effective and safe mine planning and when approaching abandoned underground mines or the mined-out and inaccessible areas of an active underground or surface mine. The abandoned mine or inaccessible areas of an active mine could be flooded with water or contain explosive amounts of methane or harmful gases. If the operator were to mine into such an area, unaware of the hazards, miners could be killed or seriously injured. The requirements to provide MSHA with certified underground mine maps annually, access for inspection of surface mine maps and the filing of mine closure maps provide essential information for MSHA to plan and conduct mandatory inspections and review and approve mandatory mine plans and permits. The required notifications prior to opening new mines and reopening abandoned mines provide information for the same purpose. Accurate and up-to-date mine maps are essential to the engineering plans and safe operation of mines and to the health and safety of the miners, including in mine rescue and/or firefighting situations. In addition, the mine closure maps also provide information essential to protecting public safety in the future land uses of the abandoned mine sites. For additional information, see related notice published at Vol. 73 FR 64985 on October 31, 2008.

The records are required to document that essential testing and maintenance of the equipment is done regularly and by qualified persons. The recordkeeping requirements are necessary not only to assist MSHA in determining compliance, but also to provide useful information to mine operators and miners' representatives about the performance of diesel engines and any deterioration or defective condition needing corrective action. For additional information, see related notice published at Vol. 73 FR 64986 on October 31, 2008.
